

New Journey With SEBT RISE

16-02-2025

SABA IFTIKHAR

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

Alhamdulillah, first I would like to thank Allah!

Lecture 1 & 2

Module-1

- Business Planning & Model Identification

Module-2

- Keyword Research & Strategy Development
- Budget Allocation for SEO, Off-Page, etc. (How much investment is required for content planning)
- Content Mapping
- Topical Authority Building

Module-3

- Assignment (Based on Module-1 & Module-2)

Module-4

- UI/UX Optimization
- UI (User Interface) – How it looks
- Focuses on visual elements such as colors, typography, buttons, and layout
- Ensures an aesthetically pleasing and easy-to-navigate design
- UX (User Experience) – How it works
- Focuses on user interaction and experience
- Aims to make interfaces intuitive, efficient, and user-friendly

Module-5

- Website Setup & Configuration

Module-6

- Content Writing
- Understanding AI's role in content writing
- When to use AI and when not to use AI in content creation
- Latest Google updates on content ranking

What is NLP?

NLP (Natural Language Processing) is a branch of AI that enables computers to understand, interpret, and generate human language.

It combines linguistics and machine learning to process text and speech.

Module-7

- Technical SEO (Search Engine Optimization)

Module-8

- AI SEO (Artificial Intelligence Search Engine Optimization)
- AEQ (Answer Engine Optimization)

How to rank websites using AI tools like ChatGPT, Perplexity AI, Deep Seek, and Gemini AI) how to rank our or other websites.

Learn AI SEO and do freelance on Upwork, Fiverr, Facebook, YouTube, etc., because it is rapidly growing.

Module-9 (Important)

- AI Tool Development

- **SAAS-Based Product Development**

Module-10

- **Link Building**
- **Off-Page Strategies**

Module-11

- **Local SEO**
- **Local SEO helps businesses appear in local search results on Google, especially for people searching near their location.**
- **It is essential for businesses like restaurants, retail stores, service providers, and local offices to attract more customers.**

Module-12

- **E-commerce SEO**
- **E-commerce SEO is the process of optimizing an online store to rank higher in Google, Bing, and other search engines.**
- **A well-optimized store attracts organic traffic, increases sales, and improves brand visibility.**
- **Freelance Platforms: Fiverr, Upwork**

Module-13 (Important)

- **Paid Advertising**
- **Google Ads**
- **Meta Ads (Facebook & Instagram Ads)**
- **Selling Services Using Ads**

Module-14:

- YouTube Automation
- Monetization Strategies

Module-15:

- Browser Automation & Outreach
- Guest Posting
- LinkedIn Marketing

This structured approach will help you build strong SEO skills and leverage them for freelancing and business growth.

Niche Research below Point we need to understand

Niches is basically topic of a website (For Example: Niche: Wireless mic, Types of niches: Best Wireless Mic, Buy wireless mic).

Domain: A domain is the address of a website on the internet, t's like the nameplate or address that tells people where to find your website.

Domain Names The unique name of your website (e.g. google.com, Yahoo.com)

Keyword: A keyword is a specific word or phrase that people type into search engines like Google when looking for information, products, or services. For example, if you're searching for "best running shoes", "best running shoes" is a keyword.

Search Volumes refers to the number of times a specific keyword or phrase is searched for in a search engine (like Google) within a particular time frame, usually monthly. **Search engine** is a software system designed to help you find information on the internet.

SERP stands for **Search Engine Results Page**: It's the page that a search engine displays after you enter a search query. The SERP shows a list of websites, pages, images, videos.

Trend: A trend refers to a general movement or change in a particular direction over time, it can be in various contexts like fashion, technology, business, or social behavior. (Google Trends will give which niche (topic) is on high trend over the time).

Keyword difficulty (KD): refers to how hard it is to rank for a specific keyword on search engines like Google. It measures the level of competition you'll face when trying to get your content to appear in the top search results for that keyword.

Search intent is the purpose or reason behind a user's search query. It helps search engines understand what the user is looking for, so they can provide the most relevant results.

User intent (also known as **search intent**) refers to the goal or purpose behind a user's search query. It's the reason why someone is conducting a search on a search engine like Google.

Type of Niches

1. Knowledge base intent

Queries seeking factual information refers to the user's intent to find answers, solutions, or information (9 Class results, Oxford admission)

2. FMA stands for First Mover Advantage.

This term refers to the competitive edge a company gains by being the first to enter a specific market or industry, offering a product, service, or innovation that no one else has introduced yet.

3. Downloadable intent

Refers to the intent of users who are looking to download content or files from a website or platform. These users typically want to obtain specific files, such as software, e-books, PDFs, templates, music, or images, often for offline use or to use the resource later. E-commerce-based intent refers to the type of user intent specifically associated with e-commerce activities, where the user is looking to buy products or services online. Users with e-commerce intent are often in the process of searching for a product to purchase, comparing options, or researching a brand before making a purchase decision.

4. Affiliate-based intent

refers to the user's intention to either promote products or services through affiliate marketing programs or to purchase products through affiliate links that lead to a commission-based transaction. It's a key component of affiliate marketing, where individuals (affiliates) earn commissions for driving sales or leads to merchants by referring customers via unique tracking links.

5. Service-based intent

refers to the intent of users who are looking to either buy a service or promote a service online. This type of intent typically involves consumers or businesses seeking services, ranging from professional services like consulting, legal help, or marketing, to lifestyle services like beauty treatments, cleaning, or fitness training.

6. Local business intent

refers to the search behavior of users who are looking for products or services offered by businesses within their local geographic area. This type of intent is common when people search for solutions that are more immediate, like finding nearby restaurants, shops, service providers, or any other local business that can fulfil their needs in a specific location.

7. Tool-based intent

refers to the intent of users who are searching for specific tools or software solutions to help them complete a task, solve a problem, or achieve a goal. This type of intent typically involves users who are looking for tools, resources, or apps that can assist them in their personal or professional lives. (imp) AI OBJECT REMOVER, AI BACKGROUD REMOVER WEB TOOL.

8. Event-based intent

refers to the search behavior of users who are specifically looking for events, activities, or happenings either locally or globally. This intent revolves around users who are interested in attending, participating in, or learning about events such as conferences, concerts, sports events, festivals, trade shows, or even personal events like weddings and parties. People with event-based intent are usually focused on time-sensitive activities.

Networking Background for Understanding

ISP (Internet Service Provider) is a company or organization that provides individuals and businesses with access to the internet. ISPs can offer different types of internet connections, including broadband (fiber, DSL, cable), satellite, dial-up, and wireless.

URL (Uniform Resource Locator) is the web address used to access a resource on the internet, such as a website, file, or image.

<https://www.example.com/blog/article.html?searchssosections>

WWW (World Wide Web) Subdomain: www.nooptional prefix before the main domain.

The Domain Name System (DNS) is like the internet's phonebook-it translates domain names (e.g., google.com) into IP addresses (e.g., 142.250.130.14) that computers use to identify each other on the internet

SSL (Secure Sockets Layer) is a security protocol that encrypts the connection between a user's browser and a website's server. It ensures that data remains private and secure during transmission. Padlock icon in the browser address bar.

Web hosting is a service that allows individuals and businesses to store their website files on a server, making their website accessible online. When someone types your domain name (e.g., www.exangis, cam, the hosting provider delivers the website's content to their browser

HTTPS (Hypertext Transfer Protocol Secure) is an encrypted and secure version of HTTP. It ensures that all data transferred between a user's browser and a website is protected from hackers and cyber threats.

How Search Engine Works

Search engines like Google, Bing, and Yahoo help users find relevant information by analyzing billions of web pages. They follow a three-step process:

Crawling (Finding Webpages)

Search engine bots (crawlers/spiders) scan the internet for new and updated pages. They follow links from one page to another to discover content.

Indexing (Storing & Organizing)

Once a page is crawled, it is stored in a massive database called an index. The search engine analyses the content, keywords, images, and structure. If a page has duplicate content or errors, it may not get indexed.

Ranking (Showing the Best Results)

When a user searches, the search engine ranks pages based on relevance and quality.

Scope of SEO

Empire Flippers (EmpireFlippers.com)

Empire Flippers is a popular online marketplace where people can buy and sell profitable online businesses

Session 2

MODULE 1: Niche Research

Tools Required

- SEO Quake (Chrome extension for on-page SEO data).
- ChatGPT (For content ideas and keyword research).
- Moz Pro (Keyword Difficulty analysis).
- SEMrush (Comprehensive SEO analysis).
- Ahrefs (Keyword research, DR, and traffic analysis).
- Moz bar (Chrome extension for SEO metrics).
- Keyword Everywhere (Search volume analysis).
- Similar Web (Website traffic insights).

Metrics for SEO Analysis

- DA (Domain Authority) - MOZ metric for site authority.
- PA (Page Authority) - MOZ metric for page-level authority.
- DR (Domain Rating) - Ahrefs metric for backlink profile strength.
- Search Volume - From Keyword Everywhere.
- Keyword Difficulty (KD) - Checked using MOZ.
- Trend Analysis - Google Trends.
- Also, give an overview of the authenticity of metrics.

Monetization Methods

- Google AdSense (Earn through ads).
- Affiliate Marketing (Earn commissions by promoting products).
- Sponsored/Guest Posts (Charge for link placements).
- Selling Products/Services (E-commerce, consulting, etc.).
- Subscription Model (Charge for premium content).

Niche Research Criteria

Niche plays a 70% role in your failure or success.

Criteria for Selecting a Niche:

- ✓ Avoid single-word niches (e.g., Motivation, Beauty, Food, Samsung, Sports).
- ✓ Focus on specific, problem-solving topics.
- ✓ Ensure at least 3 sites with DA < 20 in SERP.
- ✓ Look for Micro Niches (Google prefers them over Macro Niches).
- ✓ Ideal Page Count: Less than 100-150 pages for informational sites.
- ✓ Analyze only the first page of SERP.
- ✓ The lower the DR and RD, the easier it is to rank.

Types of Niches

1. Macro Niches
2. Micro Niches
3. Nano Niches

Important

Choose at Least 1 Competitor

✓ A good competitor is:

- Weak (Low DA)
- Organic Traffic
- ----- Replicate -----

Seasonal vs Evergreen Niches

- Macro Niches
- Micro Niches
- Nano Niches
 - Seasonal
 - Evergreen

Ideal Page Count

✓ Ideal Page Count: Less than 100-150 pages for informational sites.

Command to check:

→ site: domain.com

→ Sitemap

For example,

Suggest me low competition and similar to following niche in Canada:

9th Class Result

Session 3

First Half session Conducted by Sir Ammar Ashfaq

WHY SEO IS IMPORTANT

- iSkills > SEO
- SEO itself Skill
- Business > Blogging
- Job > Freelancing
- Niche Research > Time
- Site Develop > Domain, Time, Design
- Off-Page SEO > Time
- Rank > Profit

iSkills > SEO

- SEO itself is a skill.
- Blogging is part of the business.

Job > Freelancing

- Freelancing is a job.

Niche Research > Time

- Niche research requires time.

Site Development > Domain, Time, Design

- Site development involves domain, time, and design.

Off-Page SEO > Time

- Off-page SEO also requires time.

Rank > Profit

Important to note Everything whatever You invest on it

SERP > SEARCH ENGINE RESULTS PAGE

Ranking Signals > Ranking Factors

(A diagram showing SEO balance)

Authority

- Builds trust and credibility, influencing rankings.

Content

- High-quality, relevant content is crucial for SEO success.

Contextual Backlinks

- Links from relevant, authoritative sites help boost credibility.

Backlinks

- General backlinks that contribute to site authority and ranking.

SEO

- The overall strategy for improving visibility and search engine ranking.

Website

- The foundation where SEO practices are applied.

Niche Research

= **Difficulty**

- EMDs > EXACT MATCH DOMAIN
- RDs > REFERENCE DOMAIN
- Topical Authority > Pages
- Site Design
- Profitability

example

1st Position

RD 10 BL 50

RD 20 BL 40

RD 5 BL 30

RD 50

Google = Page Rank

EMDs > EXACT MATCH DOMAIN

- Domains that exactly match search queries for better SEO.

RDs > REFERENCE DOMAIN

- Domains that link to your website, influencing authority.

Topical Authority > Pages

- Pages with in-depth, relevant content build topical authority.

Site Design

- The structure and user experience of the website, impacting SEO and usability.

Profitability

- The potential for generating revenue through SEO efforts.

Volume

- Refers to search volume or traffic.

Country

- Geographic location affecting SEO strategies.

Language

- Language used for targeting specific audiences.

Authority

- Measures the credibility and trustworthiness of a website.

Google = Page Rank

- Google's ranking system for web pages.

Ahrefs = DR > Domain Rating

- Ahrefs' metric to measure website authority.

Moz = DA > Domain Authority

- Moz's metric to measure website authority.

Remaining 3 Lecture Continue By Sir Tanveer Nandla

Avoid Such Type of Niches

- ✗ Gambling (e.g., Indian Lottery).
- ✗ Adult content.
- ✗ Health & Finance (YMYL - Your Money Your Life).
- ✗ Copyrighted content (Movies, Exe, Cracks, MP3s, YouTube video downloads).

When Find Niches

- Check Search Volume using Keyword Surfer or Keyword Everywhere.
- Use MOZ pro/SEMrush to check Keyword Difficulty (KD).
- MOZ KD < 30, SEMrush KD < 40 is ideal.

SERP ANALYSIS

1. Site Age of COMPETITOR: 1-year age is ideal (check via whois.com).
2. Pages: Check using site:siteurl or sitemap.xml.

For example (iskills.com/sitemap.xml)

How to find sitemap of any site for pages
(Sitemap Finder)

3. DR & RD: Check with Ahrefs Free Backlink Checker.
4. Traffic: Analyze with SEMrush, Ahrefs, or Similar Web.

Goal:

1. Find a low competition niche (untapped niche).
2. Find a good competitor and replicate it.

Seed Keyword / Main Niche:

- Search Volume: Minimum 15,000/month (Keyword Everywhere).
 - MOZ KD < 25.
 - SERP Analysis: At least 3 sites with DA < 20.
 - Ahrefs DR of Main Competitor < 20.
 - Organic Traffic: More Traffic <> More Paisa.
-

EXAMPLE

= USA (Tier 1 Countries) = 10,000

Pakistan = 100,000

- Nano Niche = |

Method 1: FOR FINDING NICHEs

Through Marketplaces

1. Step 1: Go to site buying/selling marketplaces like Flippa, Motion Invest, Empire Flippers.
2. Step 2: Use filters.
3. Pick a site.
4. Reverse engineer it. {By ahref or SEMrush or Moz}
 - a. ahrefs.com > Site Explorer > Put site URL
5. Go to Keywords.
6. Use filters and try to find the best keyword.

Example:

capitalexotic.com

Capital Exotics

1. Browse Marketplaces

Go to website-buying and selling marketplaces like:

- Flippa ([flippa.com](https://www.flippa.com))
- Empire Flippers ([empireflippers.com](https://www.empireflippers.com))
- Motion Invest ([motioninvest.com](https://www.motioninvest.com))
- FE International ([feinternational.com](https://www.feinternational.com))
-

2. Use Filters to Identify High-Performing Niches

- Sort by Revenue, Profit, Traffic, or Growth Rate
- Look at Content Websites, SaaS, eCommerce, or Drop shipping

- Choose categories like Health, Tech, Finance, Pets, Fitness, or Hobbies

3. Analyze Successful Sites in Your Niche

- Pick a site that looks promising.
- Use Ahrefs, SEMrush, or Similar Web to check its SEO, traffic sources, and backlinks.
- Identify what's driving traffic—Organic Search, Paid Ads, or social media.

4. Check Keyword Opportunities

- Go to Ahrefs > Site Explorer
- Enter the site's URL to find top-ranking keywords.
- Look for keywords with high search volume but low competition.

5. Analyze Monetization Strategies

- Check how the website makes money (ads, affiliate marketing, digital products, drop shipping).
- See which revenue models work best in that niche.

6. Validate Demand & Trends

- Use Google Trends to see if the niche is growing or declining.
- Check forums, Reddit, and Facebook Groups to see if people discuss the topic.

7. Choose a Niche & Validate Profitability

- Ensure the niche has consistent demand and multiple monetization options.
- Avoid overly saturated or declining markets

Important: In Reverse Engineering

If there is no dedicated website for a specific micro-niche while reverse-engineering Ahrefs or SEMrush, we can still consider it. For example, if there is no website specifically focused on Filipino desserts, but we know its intent, it has a high search volume, and Google Trends shows consistent searches over the past 12 months, then we can create a dedicated website for it.

Session 4

Method 2: Sir Personal Fav / Effective

- STEP 1: Go to ahrefs.com. **or go to SEMrush.**
- STEP 2: Click Keyword Explorer (Ahrefs), **or Keyword Magic Tool (SEMrush)**
- STEP 3: Select blank in selected country. (Ahrefs) **or in SEMrush.**
- STEP 4: Use Filters. (**MOZ**) **SEMrush Require some manual Effort**
 - Lowest DR: 20 in top 10 or top 5.
 - Word Count: 2-Max.
 - Include: (Your Preference)
 - + More Filters According to your interest

Important points to understand while Finding Niches

Ideas for combination

{FAB} Balance check (**u can cover all bank in Dubai**)

{BANK} Salary Check (**u can cover all bank in Dubai**)

{Company} Trackers (**u can cover all company in Dubai**)

Manuals (deep dive into that niche u can find diamond niches)

Brand Hijacking

Brand Hijacking in Niche Research refers to targeting an established brand's name, keywords, or audience in a specific niche to gain traffic and visibility. This can be intentional or unintentional and is commonly seen in SEO and affiliate marketing.

Ways Brand Hijacking Happens in Niche Research:

1. Using Brand Keywords – **Creating content around a well-known brand's name** (e.g., "Nike Shoes Review") to capture its search traffic.
2. Affiliate Hijacking – **Ranking for brand-related keywords and redirecting users** to affiliate products.

3. **Mimicking Brand Identity** – **Designing a website, logo, or content that closely resembles a well-known brand to gain credibility.**
4. **Paid Ads on Brand Names** – **Running PPC ads using a competitor's brand name to steal clicks.**

Session 5

Continue.. Method 2: Sir Personal Fav / Effective

- in ahref use filters for best results like , kd <25, lower dr<20 , on serp,
- in volume filter add word like manual

Lecture on APK Niche Research

Instructor: Sir Aswad Baloch

Date: March 7, 2025

Duration: 80+ minutes

Introduction

The session focused on **APK Niche Research**, covering essential criteria, tools, and methods for effective research and implementation. The lecture provided comprehensive guidance on how to select the right niche, analyze competitors, and establish an APK-based website.

1. APK Niche Research Criteria

The following criteria are essential for conducting APK niche research:

- **Search Volume:** More than 30,000
- **Moz Domain Authority (DA):** Less than 30
- **Ahrefs Domain Rating (DR):** Less than 30
- **SERP Analysis:** At least 2-3 competing sites should have DA less than 30
- **Number of Pages:** Less than 150
- **Site Age:** The target site should be less than 1 year old to be replaced easily

This research framework ensures that selected niches have low competition and high potential for success.

2. APK-Based Website Setup and Budget Estimate

To establish an APK-based website, the following budget and resources are required:

- **Domain:** \$10 per year
- **Hosting:** Free for the first year (provided by iSkills)

- **Content Creation:** Can be self-created with knowledge from content creation and English modules
- **Website Design:** Can be done independently after completing the corresponding module
- **APK File:** Available for free
- **Off-Page SEO (Backlinks):** Can be created manually or purchased for faster ranking (guest posts)

By leveraging free resources and self-learning, individuals can establish a website with minimal investment.

3. Tool for Website Traffic Analysis

During the session, a new tool was introduced for checking website traffic:

- **Ahrefs Free Traffic Checker**
This tool helps analyze competitors and determine traffic potential in a given niche.

4. Types of APK Niches

APK niches can be categorized into two main types:

- **Micro APK:** A website providing only one specific APK
- **Macro (Brand) APK:** A website offering multiple APKs under different categories

Understanding these types helps in determining the site structure and content strategy.

5. DMCA and Copyright Considerations

The **Digital Millennium Copyright Act (DMCA)** plays a crucial role in APK niche websites. If an APK file is shared without permission, the original developer can file a complaint. In response, Google may remove the page or file from the website.

It is essential to understand these policies to avoid legal issues and ensure long-term website sustainability.

6. Content in Non-English Languages

While English is the primary business language, APK-based websites can also target non-English-speaking audiences. Some high-potential languages include:

- **Spanish** (South America)
- **Arabic** (Saudi Arabia, Gulf countries)
- **Turkish** (Turkey)
- **German** (Germany)
- **French** (France)

Targeting different languages can expand reach and reduce competition in the market.

7. Monetization Strategies

There are multiple ways to generate revenue from an APK-based website:

- **Google AdSense:** Google provides **68% revenue share** from ads displayed on the website.
- **Other Ad Networks:** Local and international ad networks can be utilized for additional monetization, with future partnerships planned for better earning opportunities.

Session 7

Method 3: Niche Research

1- Use ChatGPT / AI Tools for Niche Research

- Ask targeted questions to brainstorm ideas and discover lesser-known sub-niches.
- You must Guide ChatGPT what you want, Like You can't just ask ChatGPT to find you a niche, you must completely address the ChatGPT that who are you, what are you doing, and about niches.
- Great for generating lists of potential topics.

EXAMPLE Prompt for ChatGPT

"Consider you're an SEO & Niche Blogging Expert. The goal is to find low competition, high search volume niches. exclude saturated and high competition niches and help me find low competition niches. The sample niche that I want you to find is: AI background remover.

You can find combinations of niches for me like AI [Keyword] remover. Remember, niches should be low competition. Low competition means low DA Sites on 1st SERP. I understand you can't check DA directly, but somehow, if you can give an idea. And only list those niches, without description."

Or

"I have few combinations of niches, I am Using Keyword Explorer of Ahrefs, so can you suggest keywords same like menu Prices "Paste Your Keywords Here"

Then ask further questions like ask ChatGPT to give you low competitions niches and other thing regarding your criteria or refer a website or place or other things so ChatGPT give you what you want". After that analyse the ChatGPT generated Keywords or content.

Other Possible Combinations

- **AI [Keyword] Finder:** Searching for “AI product finder,” “AI job finder,” etc.
- **AI [Keyword] Generator:** Such as “AI content generator,” “AI quiz generator,” etc.

Remember, we aim for specific subtopics that are not heavily targeted by big players.

2- Use NPL Categories

- Refer to resources like Google Cloud Natural Language Categories to see how content might be categorized.
- This can inspire you to explore subcategories with fewer competitors.

Steps

- **Open** the Google Cloud Natural Language Categories page.
- **Review** the **hierarchical categories**.
- **Match** your topic to the **closest** relevant category.
- **Use** those category keywords in your content and SEO strategy.

This approach helps **search engines** (and Google’s NLP) accurately identify and rank your content, boosting your site’s visibility.

Low-Competition Niches in Different Areas

1. Study Grants & Scholarships in Australia

- Many people look for scholarships, but focusing on a specific country (Australia) narrows the field.
- Potential sub-niches: *Postgraduate scholarships in Australia*, *Women-specific grants in Australia*, etc.

2. Simulation Games

- While gaming is popular, focusing on simulation sub-genres (e.g., farming sims, city-building sims) can uncover low-competition keywords.
- Potential subtopics: *Mobile simulation games reviews*, *PC simulation games tips*, etc.

9 Lecture on Niche Research

Instructor: Sir Aswad Baloch

Date: March 15, 2025

Why do Niche Research

== Topics for Today

- How to do Niche Research?
- How to do Niche Research in a specific country? (Country Targeted SEO)
- How to do Niche Research for other Languages?
- Bonus for those who wait till the end!

Filter use in AHREF

1. Volume => **20000**
2. KD **10**
3. DR **5**
4. Words **minimum 2**
5. If EMDs exist, **then max 2 allowed, and none should have RDs above 60**
6. APK not required
7. Tool/Info

Enter keywords separated by commas

Philippines

keyword lists

Testing this feature

7

Top searches in Philippines

Intents: KD: Up to 10 X Volume: From 20K X Growth rate: Growth forecast: Lowest DR: Up to 5 in top 5 X Traffic Potential: Target: SERP features: Include: Any of 2 X First seen: Word count: From 2 X + More filters

8 keywords

Keyword	Intents	KD	SV	GR 12M	DD	GSV	TP	GTP	CPC	CPS	Parent Topic	SF	First seen
+ manok na pula mod apk	N T Branded	2	61K			64K	45K	46K	\$0.03	N/A	manok na pula mod apk	1	SERP 7 Nov 2
+ loklok apk	N C T Branded	3	57K			138K	16K	22K	\$0.04	N/A	loklok apk	1	SERP 27 Mar
+ summertime saga mod apk	T Branded	7	51K			137K	80	350	N/A	1.28	summertime saga 20.9 apk	1	SERP 10 Sep
+ netflix mod apk	C T Branded	2	42K			260K	25K	153K	\$0.06	1.29	netflix mod apk	1	SERP 23 Jan
+ apk abc	N Branded	2	37K			142K	0	0	N/A	N/A	loklok mod apk 2024	1	SERP 15 Oct

8. Word count= 2
9. Use include = E. g Generate, calculate click on any word

Advantage of Country-Specific Niches

Country-targeted SEO is essential for ranking in a specific region.

Steps to Perform Country-Specific Niche Research

1. Use Keyword Research Tools (Ahref, Google Keyword Planner, SEMrush) to find search trends in your target country.
2. Change Search Engine Settings to the target country and language for accurate keyword data.
3. Analyze Local Competitors by checking their domain strength and backlinks.
4. Check Google SERP (Search Engine Results Page) for your keywords in the local search engine version.
5. Look for Low-Competition Opportunities by finding topics with limited high-authority competitors.

Example:

If you're targeting **Mexico**, adjust your search settings to **Google Mexico** (google.com.mx) and use Spanish-language keywords.

Other Languages

Niche Research for Other Languages

Expanding into non-English markets can help you find untapped opportunities.

- The language that is spoken in Saudi Arabia and UAE go for it
- The language that is preferred in Egypt, Holland, Spanish → Go for it

Best Languages for SEO Expansion:

- ES (Spanish)
- FR (French)
- DE (German)
- PT (Portuguese)

Pro Tip: Download-focused niches (e.g., software tools, templates, plugins) often perform better than purely content-focused niches.

-  Content Focused
-  Download Focused

Example:

- Find in Ahrefs (Mexico)
 - KD → 10
 - Volume → 40K

- DR → 15

What is next to find better niches for Non-English?

1. **Detect Language** → Use **Google Translate**
2. **Focus on content** → Not just downloads
3. **Rich and detailed meanings**
4. A **word has multiple versions**, and we don't always know which version a country uses
5. **Each country has language variations**
6. **Now find in Ahrefs**
7. **Pick a keyword** (like "Download") and put it in **Darsager**

Steps to refine keywords

1. Copy the keyword and search it with **famous brand names**
2. Check on **Chrome Darsager** if the **exact variation** is used in that language
3. If it's not used, then there is a different keyword
4. **Filter the results** in Darsager to find the best **niches**

BONUS POINT OF LECTURE

Revenue Potential Based on Tier System

Monetization depends on the traffic source and user location. Higher-tier countries generate more ad revenue.

Tier 1 (High Revenue)

- English Users: \$15-20 per 1,000 visits
- Other Languages: \$7-10 per 1,000 visits

Tier 1 (High Revenue)

- English Users: \$6-10 per 1,000 visits
- Other Languages: \$3-5 per 1,000 visits

Tier 1 (High Revenue)

- English Users: \$2-4 per 1,000 visits
- Other Languages: \$1 per 1,000 visits

 **Focus on Tier 1 Countries like USA, UK, Canada, and Australia for maximum earnings.**

Practical Example & Calculations

To estimate potential traffic and earnings:

 Suppose:

- 10 pages targeting AI-related keywords
- Each page gets 1,000 visits per month
- Total traffic = 10K + 3K + 15K = 88K visitors
- Revenue estimate (RPM) = 88K/1K * RPM value

 **Higher traffic + low-competition keywords = More revenue!**

2 MODULE CONTENT COVERAGE

14 Lecture on Niche Research

MODULE 2: CONTENT COVERAGE

Content Coverage:

1. Keyword Grouping

- Categorizing keywords by intent and theme.
- Creating **Keyword Clusters** to support topic authority.

2. Keyword Research

- Find relevant keywords for your niche using tools like:
 - Google Suggest (Autocomplete)
 - Google Trends
 - Competitor Analysis
- Example: Searching “MS Scholarships in USA” to see keyword variations.

3. Content Planning

- Mapping keywords to specific pages or blog posts (**Keyword Mapping**).
- Planning around **Search Intent** (informational, commercial, transactional).

4. Gap Analysis

- Identifying missing content that competitors are ranking for.
- Helps uncover **untapped opportunities**.

5. Niche Research / Seed Keywords

- Start with broad **seed keywords**, then narrow down to more specific, long-tail versions.
- Example: “Spotify APK” leads to variations like “Download Spotify Premium APK”.

Important baat

- **Ecommerce / SaaS Websites:**

Your site should cover:

- Product Pages (with model/variations)
- Category Pages
- Blog Section (to address user issues, product comparisons, how-tos)

- **Content Freshness:**

- Google values **updated and fresh content**.
- Keep revisiting and updating older posts.

- **Fellow Keywords:**

- These are **related terms** that might not be direct keywords but are contextually relevant.
- Example: Instead of just “Spotify,” terms like “Spotify APK” or “Spotify for Android” can be useful.

Keyword Application Examples:

Service-Based Website (e.g. AC Repair):

1. *AC Services in [Area]*
2. *[Brand] AC Services in [City/Area]*
3. Blog Topics:
 - Common AC issues
 - Fixes & Troubleshooting
 - Comparisons between brands/models

Movers / Local Services Example:

- “[City] Movers”
- “Best Movers in [Area]”
- Blog: “How to choose the best moving company in [City]”

15 Lecture on Niche Research

MODULE 2: CONTENT COVERAGE

continue

Lecture 15–18: Keyword Research & Content Planning

Module 2: Content Coverage

Keyword Process Overview

1. Keyword Grouping
2. Keyword Clustering
3. Keyword Research
4. Keyword Mapping
5. Gap Analysis

Niche Research

Seed Keyword Example: *MS Scholarships in US*

Use the seed keyword and expand it using **Google Instant**, **Ahrefs**, and **competitor analysis**.

Method 1: Google Instant

Use Google's autocomplete feature:

- Example:
 - “AC services in [AREA] of [CITY]”
 - “[Brand] AC Services in [AREA/CITY]”
- Blog Post Ideas:
 - Common Issues / Problems / Fixes

- Comparisons: e.g. *Hasmi Movers vs GI Movers*
-

✅ Method 2: Ahrefs

- Go to **Site Explorer** in Ahrefs.
- Check the **top pages** and **keywords** they are ranking for.
- Export keyword data.
- Use ChatGPT:
 - Upload the exported file.
 - Ask for keyword clustering (combine similar-intent keywords under one group).

Important Tip:

- Apply this method on 4 competitors.
 - Collect their keywords and analyze.
-

📄 Insights from Manual Notes

Same-Intent Keyword Strategy

- Focus only on **search volume**, don't worry about keyword difficulty (KD).
 - Prioritize **main keywords** that are:
 - Highly relevant
 - Low in KD
 - High in search volume
 - Example:
 - "AC Repair in Dubai" – Must ensure high **relevancy** to location and service.
-

✅ Method 3: Analyze Competitor Pages

- See what keywords they're using.
- Understand their content gaps.
- Collect all useful keywords for your planning.

✅ Method 4: Google News

- Use it to find **fresh content ideas** for trending or news-based niches.
-

✅ Method 5: Google Alerts

- Set up alerts for selected keywords to stay updated.
 - Example setup:
 - Keyword: "Spotify app"
 - How Often: As-it-happens
 - Region: Any
 - Language: English
 - Deliver to: your email
-

✅ eCommerce Keyword Strategy

1. Target **Product Variations/Models**
 2. Cover **Product Categories**
 3. Blog Content:
 - Issues / Fixes
 - Comparisons
-

🎯 Final Strategy Summary:

- Combine keywords with **similar intent** under one group.
- Map keywords to content types (pages, blogs, categories).
- Focus more on **search volume** and **relevancy** than KD.
- Use tools like Ahrefs, Google Instant, and Google Alerts.
- Export competitor data and use ChatGPT for clustering.

Lecture 16 MODULE 2: APK CONTENT COVERAGE

Session— Sir Aswad Baloch

Date: 11/04/25

✓ What is Content Coverage?

It means that you cover all the possible questions or sub-topics related to a main topic.

Example: If your niche is “TeraBox Mod APK”, then you need to cover things like:

- TeraBox for PC
- TeraBox for iOS
- TeraBox Latest Version
- TeraBox Old Version
- TeraBox Premium Features
- TeraBox Login Problem
- TeraBox Safe or Not?
- etc.

✓ Step-by-Step Method:

◆ 1. Finalize the Niche

Example: TeraBox Mod APK

◆ 2. Find Sub-topics or Related Keywords

You can use tools like Ahrefs, Semrush, Google, Google Trends, or Keyword Planner.

Each tool gives slightly different results, so using a combination of tools is better.

◆ 3. Do Keyword Grouping (By Relevancy)

Group the keywords that have the same intent.

Example:

- Group Name
- Keywords/Sub-topics

PC Version

terabox for pc, terabox apk for pc, terabox pc download

iOS Version

terabox for ios, terabox iphone

Latest Version

terabox latest version, new version, updated version

Old Version

terabox old version, apk old version

Premium Features

terabox mod premium, premium unlocked features

Errors & Issues

terabox login problem, terabox not working

◆ 4. Check Search Volume

If a keyword has 200+ searches/month, create a separate article for it.

If it has less, then either merge it into another article or ignore it.

Article Planning:

Each group will have a separate SEO-optimized article.

Examples:

“Download TeraBox for PC – Full Guide”

“TeraBox Old Version APK Download (With Links)”

“TeraBox Premium Unlocked Features Explained”

Bonus Tips:

The benefit of Content Coverage is that Google will consider you an authority in that niche. Make sure internal linking is strong between all articles. Always target the country where the highest search volume is coming from (like in your case, India).

Why Do We Keep the 200+ Search Volume Benchmark?

Now what some people have done is — they’ve taken the meaning of “topic coverage” to be this:

“even if a keyword has zero volume, write content on it, and you’ll still rank.”

But in reality, what Google is looking at is:

Is this person actually covering relevant content or not?

And who are they doing it for? They’re doing it for users, right?

So Google will check — the topic you’re writing on, is anyone even searching for it?

If no user is searching for it, and you just wrote an article for the sake of topic coverage, then for Google, that becomes useless.

That’s why I kept a benchmark — that whatever keyword you want to write on, its search volume should be at least 200.

Is 200 a must? No. This is just my personal limit.

You can go with 100, 150, or if a topic really seems valuable, even 50.

But the logic is simple:

Google should feel that your article is actually useful for someone.

The Correct Way to Group Keywords

Whenever you collect keywords, first group them.

Like:

- TeraBox MOD APK Premium Unlocked
- TeraBox MOD APK No Ads
- TeraBox MOD APK Latest Version
- TeraBox MOD APK 2024 Download

Now all these keywords have one thing in common — “TeraBox MOD APK”

So we need to see — what’s unique in each one?

Don't Do Keyword Stuffing — Use Only the Unique Parts

If you repeat each keyword exactly as it is in the content,
that becomes keyword stuffing — and Google doesn't like that at all.

So what to do?

The common part (like “TeraBox MOD APK”) — we'll use that once.

And from the remaining keywords, we'll just take the unique part, like:

- Premium Unlocked
- No Ads
- Latest Version
- 2024 Download

Now we'll naturally use these in the content —

and Google will automatically understand which keywords we're covering.

Real-Example

We had collected 14 keywords for one article.

But when we removed the repeated/common words,

only 4 unique points remained:

- Premium Unlocked
- No Ads
- Latest Version
- 2025 Download

Now we just naturally added these 4 points into the article —

and that page ranked for all 14 keywords.

- ☒ No stuffing
- ☒ No repetition
- ☒ Just used the unique stuff

What to Do About Keywords with Years?

If someone was searching for “TeraBox MOD APK 2023” or “TeraBox MOD APK 2024” —
obviously, in 2025, they'll search for “TeraBox MOD APK 2025”.

So we'll just go into our content and replace all old years with 2025.

And yes — sometimes it takes Google 2–3 months to update keyword volumes for the new year.

So don't worry about that.

Also Look at Keyword Variations

Some keywords have the same meaning, but they're still searched differently:

- Free Download
- Without Ads
- Ad-Free
- Updated Version
- New Version

So just use all of these naturally in your article.

Device or Platform-Specific Keywords

You might have some keywords related to different devices, like:

- TeraBox iOS
- TeraBox for iPhone
- TeraBox for PC
- TeraBox for Windows
- TeraBox on Laptop
- TeraBox for Emulator

If their volume is good, you can make a separate section or even a separate article for them.

Avoiding Risky Keywords (For AdSense Approval)

- Avoid words like cracked, hacked, cheat, adult, and live streaming.
- Get approval first, then update content with such keywords (smartly).
- If your main focus is AdSense, then you should reduce the use of these risky keywords — and also write some informational articles that are AdSense-safe.

Bonus Strategy – Non-English APK Niches

- Start in English:
 - Do full keyword research in English.
 - Write content based on those keywords.
 - Target Language Switch:

- Identify the top country (e.g., Mexico for Spanish).
- Use tools to translate high-volume English keywords to the target language.
- Filter Target Language Keywords:
- Compare article potential in English vs. Target Language.
- Only choose topics with 200+ search volume in the target language.
- Write, Then Translate:
- Write high-quality, researched content in English.
- Then use ChatGPT, DeepL, or Google Translate to convert into the target language.

Final Structure Recap (For APK Content Coverage)

✅ Phase 1: Keyword Research

Use all taught tools.

Extract max keywords from your main niche.

✅ Phase 2: Keyword Grouping

Create keyword groups based on topic type.

Examples: PC Group, iOS Group, Login Group, Old Version Group, etc.

✅ Phase 3: Filter & Finalize

Remove repeated/common keywords.

Keep only unique parts.

Plan 1 article per group.

17 Lecture on content Coverage Research

Instructor: Sir Ammar Ashfaq

 **Complete Lecture on Keyword Research & Grouping (with Competitor Analysis)**

Basics of Keyword Research

 **Goal:** Understand keyword research methods and keyword grouping.

 **Topics Covered:**

1. Understanding Basic SEO Terms

- **Traffic Rider Mod APK** – Example of a niche keyword.
 - **Topical Authority** – Google prefers websites that are topic experts. Build content around one niche for better authority.
 - **Keyword Cannibalization** – When multiple pages on your site rank for the same keyword, it confuses Google and hurts your SEO.
-

 **Manual Keyword Research Method**

 **Tools Required:**

- **Google Search (Instant Suggestion)**
- **Keyword Helper Tools** (like Keyword Shitter, Keywordtool.io, etc.)

 **Step-by-Step Process:**

1. **Go to Google**
Start typing your main keyword (e.g., “best phone under”) and observe the suggestions that appear – these are popular searches.
2. **Use Keyword Helper Tools**
Input your keyword in free tools like **Keyword Shitter** to get long-tail keyword suggestions.
3. **List the Keywords**
Copy all the suggestions into a Google Sheet or Excel.

4. Group Keywords Based on Intent

For example:

- “best shoes for men” and “top shoes for office” both target similar search intent → same group.
- “how to polish shoes” → different group.

Common Issues & Advanced Grouping

! Issues in Manual Method:

- Google Instant **doesn't show alternate versions** (synonyms or related phrases) of keywords.
- Doesn't cover all possible keyword variants.

✅ Alternate Method: Using Ahrefs or SEMrush

Steps:

1. Open **Ahrefs Keyword Explorer**.
2. Enter your seed keyword.
3. Use filters like “**Also Rank For**” or “**Having Same Terms**”.
4. Export all matching keywords and terms.

✅ Grouping & Topic Clustering:

Group keywords by:

- Search Intent
- Topic Relevance

Example:

Cluster Topic	Keywords
Buying Shoes	best shoes 2025, shoes under 1000
Shoe Maintenance	how to polish shoes, clean sneakers

Sir Secret Combo Method (Advanced)

🧠 Ideal for users with Exact Match Domains (EMDs)

Secret Strategy Steps:

1. **Search Keyword in Ahrefs or SEMrush**
 - Identify the **top-ranking site** for the keyword.
2. **Scrape EMD-Based Competitor Sites**
 - Manually open the top results.
 - Copy all the URLs (those that match the keyword exactly).
3. **Paste into Google Sheet**
 - Keep everything in one place for analysis.
4. **Select 2nd Country**
 - Search the same keyword with location filter (e.g., UK, US).
 - Repeat scraping process.
5. **Remove Duplicate Sites**
 - Clean data by removing duplicate entries.

Competitor Analysis (Manual Method)**Tool: Ahrefs → Site Explorer****Step-by-Step:**

1. Enter your **main competitor's domain** into Site Explorer.
2. Select **Top Pages** → Filter by your country or "All World."
3. Analyze which pages rank for which keywords.

Do This:

- Copy all top-performing URLs.
- Search them in Google to check structure.
- Save them in **Google Sheets**.

 Note:

If SERPs are full of **branded sites** and **no EMDs**, this method won't work. 🙌 Use **Google Instant** method instead.

Day 5: Finalization + Article Writing Prep

Final Keyword Polishing:

- Use **Site Explorer** for remaining competitors.
- Analyze keywords and export them.

Tool: Keyword Shitter (again for manual extraction)

Article Writing Prep (Next Class Preview):

You'll write SEO-optimized articles for grouped keywords.

Focus:

1. Writing in **English**
 2. Using **AI** tools for bulk drafting
 3. Understanding **HTML elements**
 4. Exploring **other languages**
-

Keyword Cannibalization Reminder:

- If **multiple pages** target the **same keyword**, it leads to confusion and poor rankings.
 - Always **cluster keywords** and write **unique content** for each.
-

Summary of Tools Used:

Tool	Purpose
Google Instant	Quick keyword ideas
Keyword Helper	Long-tail keywords
Ahrefs	Competitor analysis, keyword ideas
SEMrush	Site scraping, keyword clusters
Google Sheets	Organize and format data

18 Lecture Article Writing

Instructor: Sir Ammar Ashfaq

Lecture 18 – Article Writing & SEO Structure

 **Instructor:** Ammar Ashfaq

Main Topics Covered:

1. Niche & Keyword Research
 2. Article Structure & Heading Format
 3. Basic HTML Knowledge
 4. Competitor Research
 5. Chrome Extensions for Content Planning
-

1. Niche & Keyword Research

Keyword Research:

Before writing content, choose a **main keyword** related to your niche.

Example: "*Traffic Rider MOD APK*"

This is what users are searching for — your article must revolve around this.

KW Grouping / Content Planning:

Once the main keyword is finalized, gather **secondary keywords** (related terms that people also search for) and group them logically in your article using headings (H2, H3, etc.).

2. Content Writing Principles

Dual Purpose:

Your content should serve **both users and Google**:

- **Users:** Easy to read, useful information, engaging structure.
- **Google:** Proper HTML structure, keywords, headings for indexing.

Example Topic:

"Traffic Rider MOD APK" – You can explain what it is, its features, how to download, etc.

3. Google Bot Process (SEO Basics)

Search engines like Google use **bots (spiders)** that:

- Crawl your website (read content)
- Index the content (store it)
- Rank based on relevance & SEO structure

That's why **HTML structure** matters!

4. HTML Tags & Heading Structure

Headings:

- **H1:** Main Title (used only once per article)
- **H2:** Major sections (e.g. Features, How to Download)
- **H3:** Sub-sections (e.g. individual features like Bikes, Maps)
- **H4:** Further breakdown (e.g. Classic Bikes, Heavy Bikes)

 Avoid using H5, H6 — not useful for standard articles.

✓ Other Useful Tags:

- `<p>` = Paragraph
 - `<table>` = Tables
 - `<li>` = List Items
 - `<ol>` = Ordered List
 - `<ul>` = Unordered List
 - `<a href>` = Add hyperlinks
 - `<strong>` = Bold text
-

📦 5. Article Structure Template**📌 Structure:**

H1: Main Title (e.g. Traffic Rider MOD APK)

Intro: 1–3 paragraphs

H2: What is [Topic]?

→ Paragraphs

H2: Features

→ H3: Feature Group 1

→ H4: Feature Detail A

→ H4: Feature Detail B

→ H3: Feature Group 2

→ H4: Detail A

H2: How to Download

→ H3: Download for PC

→ H3: Download for Android

6. Competitor Research Strategy

Steps:

1. Google your main keyword.
2. Open **top 10 ranking articles**.
3. **DON'T copy headings directly.**
4. Remove **common headings** found in all.
5. Combine **unique headings** from each site — and cover those in your article.

 This helps you build a more complete & unique piece that beats competitors.

7. Useful SEO Tool: Aher Extension

Chrome extension that helps copy website headings quickly.

Steps:

- Install the **Aher Extension**
- Open a competitor's article
- Use **"Copy Heading"** option to get structure

Then:

- Remove unnecessary headings (e.g. promotional ones)
 - Use SEO-friendly structure
-

Article Framework Example: Traffic Rider MOD APK

H1: Traffic Rider MOD APK

H2: What is Traffic Rider?

→ Paragraph (explaining the game/app)

H2: Features

H3: Multiple Bikes

H4: Heavy Bikes

H4: Racing Bikes

H4: Classic Styles

H3: Ala Bala (Other Features)

H4: Customizations

H4: Upgrades

H4: Maps

H2: How to Download

H3: How to Download on PC

H3: How to Download on Mobile

This structure gives clarity, SEO advantage, and a complete user experience.

 Summary:

Step Task

- 1 Choose a **niche** & keyword
 - 2 Research **competitors**
 - 3 Plan headings (H1 > H4)
 - 4 Write clean content for user + bot
 - 5 Use HTML structure
 - 6 Use tools like Aher for efficiency
-

19 Lecture Article Writing

previous Continue--

Instructor: Sir Ammar Ashfaq

 **Lecture 19 – Complete Lecture: SEO Content Writing for Blogs, Tools, and APK Websites**

 **Instructor:** Ammar Ashfaq

 **Objective:**

To understand how to write **SEO-optimized blog content** that pleases **Google** and **satisfies the user** by mastering structure, HTML formatting, content density, and intent.

1. Understanding the Basics

"Google ko samajhna hai. Google ko read krna hai. Google user ko dekh k content dikhata hai."

- Every blog is a part of a website, but not every website is a blog.
 - **Blog** = Articles (APK, Tool reviews, Tutorials, How-to guides).
 - **Website** = Broader, includes tools, services, e-commerce.
-

2. HTML Formatting Essentials

Use these key HTML tags for proper structure:

- **<h1>**: Title of the blog (Only once per post)
- **<h2>**: Main sections like "Features", "About", "Download"

- **<h3>**: Sub-explanations or steps within H2
 - **<p>**: Paragraphs for explanations
 - **/**: Highlighted key points or important text
 - ** / **: Unordered and ordered lists (e.g., Features or Steps)
 - ****: Add images/screenshots for visual support
 - **<table>**: For comparing features, ratings, versions
 - **link**: For internal/external linking
-

3. Blog Post Structure

◆ Start with H1

Example: `<h1>Traffic Rider Mod Apk (Latest Version)</h1>`

◆ Introduction (1-3 paragraphs)

- **No "Today I'm going to tell..." – Avoid fluff!**
- Address the user's problem emotionally or practically.
- Example:

"Do you miss the thrill of bike racing games? Traffic Rider Mod APK brings the ultimate experience—free, unlimited, and thrilling."

◆ H2: About the App / Tool

- Give background.
- What is it? Why is it popular?

◆ H2: Key Features

Use bullet points:

`<ul>`

`<li>Unlimited Money</li>`

`<li>Unlocked Bikes</li>`

No Ads

◆ H2: How to Download and Install

- Provide download buttons (above the fold = Top)
- Use screenshots or step-by-step guide
- Include file size, version, update date

4. Competitor Analysis (SERP Research)

- Search your main keyword on Google
- Open **Top 10 sites**
- Observe:
 - Headings
 - Use of images
 - Download buttons
 - Screenshots
 - Lists / Tables
 - Star ratings
 - Videos

→ **Extract unique things from each site**

5. Information Density & User Intent

“Google khush tab hota hai jab user khush ho.”

- Don't just fill words. Give **useful, intent-based** content.
- Always ask: “User kyu aaya hai?”
 - For APK: Just wants to **download quickly**
 - For tools: Wants quick **access or solution**

- For reviews: Wants **trustworthy info + images**

6. E-Commerce vs Info Sites

- E-commerce (e.g., “Buy Standing Lamp”) → Only 300-400 words needed. Focus on product, CTA, reviews.
- Informational (e.g., “41 Biggest Shopping Malls”) → Needs **TOC**, structured list, maybe **1 para + list**.

7. Copywriting Psychology (Selling with Emotion)

INTRODUCTION OF ARTICLE

Example: **Anti-Wrinkle Cream**

- **Start with user problem emotionally:**

"You feel sad when wrinkles steal your confidence..."

- **Relatable moment:**

"There's a wedding next week and you're afraid to show your face."

- **Then, offer the product as a solution:**

"With this anti-wrinkle cream, your skin regains youth in just weeks."

✓ **Formula:**

Problem → Empathy → Solution (Product)

Example: **Weight Loss Diet**

- **Problem:**

"Your clothes don't fit. No time for the gym."

- **Promise:**

"This easy-to-cook diet will help you lose weight from home."

- **Support:**

Affordable, kitchen ingredients, flexible with or without workouts.

8. Media & Content Enhancement

Include as per blog type:

Element Use Case

Images App screenshots, product visuals

Tables Feature comparisons

Videos Recipes, app demo, reviews

Ratings Build trust (stars, user reviews)

Buttons Clear CTAs (Download, Try Now)

Final Notes:

- Don't bury download buttons.
- Use headings, media, and structure to make Google and the user both happy.
- Treat every blog as **mini-websites of value**.
- Never forget:

User is King – Always write for them first.

20 Lecture Article Writing previous

Continue--

Instructor: Sir Ammar Ashfaq

Date: April 20, 2025

Objective of the Lecture

Today, we'll learn **how to write high-quality SEO content** for app/game articles — specifically focusing on **Traffic Rider APK**. You'll learn:

- How to **structure your content**
- How to **use competitors to your advantage**
- How to write an **SEO-friendly introduction and body**
- How to understand what Google looks for in good content

1. Introduction Writing – How and Why?

Rule: Every introduction should be 2 to 3 paragraphs

- Each paragraph should have:
 - **1 Power Sentence** (main idea)
 - **2 Supporting or “Toy” Sentences** (small details)

Why is this important?

Because **Google reads content like a human**, it uses AI (like **RankBrain**) and **NLP (Natural Language Processing)** to understand **context**, not just keywords.

So instead of stuffing keywords, your introduction should feel **natural, informative, and engaging**.

 Example:

Traffic Rider APK is one of the most exciting motorbike racing games for Android. It offers smooth controls, stunning environments, and high-speed action. Released on **December 15, 2015**, by **Soner Kara**, the game quickly became a fan favorite.

What makes Traffic Rider unique is its **realistic weather, time of day system, and variety of bikes**.

Players can complete missions, earn coins, and upgrade or unlock new bikes to enhance their gameplay.

 2. Use of H2 Headings (and Why Copying Them Is Okay)

 **Rule:** Use the exact H2 headings that competitors are using.

Why? Because these headings are **proven to rank** in Google search results. So, if multiple top websites are using a specific heading (like “About Traffic Rider APK”), then you should too.

 Example H2 Heading:

About Traffic Rider APK

Don't worry about copyright. Headings are not copyrighted, and using common titles helps your content compete.

 3. Content Structure Under Each Heading

 **Step-by-step Process:**

 **First Paragraph:**

Write a **general explanation** using your own knowledge and facts (e.g. developer name, game release date, main features).

 **Second Paragraph:**

Now, go to **Google** and:

1. Search for **Traffic Rider Mod APK**
 2. Pick **3–4 top competitors** (websites that show up on the first page)
 3. Read their content (don't copy!)
 4. **Summarize the key points in your own words**
-

Example Using a Competitor Heading:

Competitor Heading: 13 *Various Environments*

Points they mention:

- Different road types (coastal, city, desert)
- Weather effects (rain, fog, sunny)
- Time system (day, night)

 Now write something like this:

Traffic Rider features **13 unique environments**, each designed to give a different visual and gameplay experience.

From **sunny highways** to **foggy nights**, the game lets you race through multiple scenarios that feel real.

These dynamic settings make every ride exciting and prevent the gameplay from feeling repetitive.

4. How to Analyze Competitor Content

- Search “Traffic Rider Mod APK” on Google
- Don't revisit the sites you've already seen
- Open new competitor sites
- Look at headings like:
 - Features of Traffic Rider
 - What's New in Mod Version
 - Gameplay Experience

- Extract important info like:
 - Bike models and upgrades
 - Weather and traffic effects
 - Mod features (unlimited coins, unlocked bikes)

Now, rewrite those points in your own language.

5. Why Understanding Google Is Important

Google uses **AI-based systems** to decide what content to rank:

- **RankBrain:** Understands **what users mean**, not just what they type
- **NLP (Natural Language Processing):** Reads your content like a human

So your writing should:

- Be **clear and natural**
- **Explain things properly**
- Avoid unnecessary repetition
- Use **keywords smartly**, not forcefully

Assignment (Before Next Session)

1. Pick **3–4 important headings** from top-ranking competitor sites
2. Read what they've written under each heading
3. **Write your own original version**, using facts + competitor inspiration
4. Keep the **structure and clarity** we discussed:
 - Short paragraphs
 - Power + toy sentences
 - Use H2s for headings

Next Session Plan

- Do a **complete recap** of content writing strategies
-

**21 Lecture is not included because of
Ecommerce**

22 Lecture Article Writing

NLP ANALYSIS ,ENTITIES--

Instructor: Sir Tanveer Nandla

Objective:

- Understand how to extract important **NLP entities** from competitor content.
- Learn to weave these entities naturally into your own article.
- Master a prompt that gets ChatGPT (or any AI) to do the heavy lifting.
- Build a content strategy that beats your competitors in SEO.

Step-by-Step Explanation:

Step 1: Copy Competitor Content

👉 Before writing anything, **copy the competitor's article** that is ranking high on Google for your target keyword.

Example:

- Target topic: *Best Men's Hairstyles for 2025*
- Find 2-3 top-ranking articles.
- Copy their full content (for analysis, not for copying words).

Step 2: Perform NLP Analysis

👉 **NLP** stands for **Natural Language Processing**.

It helps identify important "**entities**" or concepts (like keywords, brands, product names, trends) that Google sees as *important* for the topic.

In simple words:

Entities are the building blocks of what Google understands your article is about.

We need to extract those entities from competitor articles to use them smartly in ours.

Step 3: Extract Entities

👉 Here's where you **ask ChatGPT** to help you.
You will use a special **prompt** (script) to get the AI to:

- Extract important terms
- Categorize them neatly
- Tell you how to use them naturally in writing

Step 4: Prompt for ChatGPT

Here's the **full prompt** you should give:

📄 Full Prompt to ChatGPT:

Act as an NLP + SEO Expert Content Strategist.
I will share a full competitor article about a trending topic.
Your job is to:

1. Extract and list important NLP entities.
2. Categorize these entities neatly.
3. Suggest how I can organically and naturally weave these entities into my own article (so it sounds natural, adds topical depth for SEO, and doesn't look keyword-stuffed).
4. Give practical writing strategies and examples (like table format ideas, comparison sections, FAQ sections, product mentions, celebrity name drops, etc.) to enhance my article structure.
5. Share any bonus tips for outperforming the competitor (like extra sections, angles, or keywords they missed).

Be conversational and a bit casual but very tactical and actionable.

Also, add your opinion if you feel there's a better way to beat the competitor.

End by asking if I want you to structure or draft the SEO-optimized article too."**

👉 If you want a **shorter version** of the prompt (for quick sessions), you can say:

"NLP entity extraction + Organic placement + SEO content enhancement strategy Writing examples. Bonus competitive tips."

Practical Example:

You:

"I'm going to write an article about *Best Men's Hairstyles for 2025*.

Before writing, I want you (ChatGPT) to perform NLP analysis and extract entities from competitors' content.

Ready?

Now paste competitor article here."

After Getting Entities, Next Steps:

1. **Naturally weave** the important entities into your article:
 - Don't force keywords.
 - Mention trends, brands, celebrity hairstyles, etc. naturally.
2. **Structure your article better:**
 - Add tables (e.g., Comparison of short vs medium hairstyles).
 - Add FAQs (e.g., "What is the best men's hairstyle for thin hair in 2025?").
 - Add sections (e.g., "Top Celebrity Hairstyles to Watch in 2025").
 - Mention new trends (AI hairstyle apps, eco-friendly hair products).
3. **Bonus Tips:**
 - Cover angles your competitors missed.
 - Add new statistics, new expert quotes, or product links.
 - Update for future trends even if they didn't.

Conclusion

 By following this NLP Entity + Content Enhancement strategy:

- Your article becomes **richer, more complete**, and **more aligned** with what Google expects.
- You can **outrank competitors naturally** without keyword stuffing.

✅ Always end your NLP analysis session by asking:

"Would you like me to structure or draft the SEO-optimized article too?"

Because a well-structured article is the final winning move!

Quick Summary:

Step	Action
------	--------

- | | |
|---|---|
| 1 | Copy competitor article |
| 2 | Perform NLP entity extraction |
| 3 | Categorize and plan natural placement |
| 4 | Structure article with smart SEO sections |
| 5 | Add extra angles to beat competition |
-

23 Lecture Article Writing NLP ANALYSIS

REVISION previous Continue--

Instructor: Sir Tanveer Nandla

Main Topics:

- Value-Added Content
 - Semantic SEO
 - NLP Entity Extraction
 - Competitor Style Analysis
-

Objectives for This Session:

- Create high-quality, value-added content.
 - Use **Semantic SEO** techniques.
 - Perform **NLP analysis** on competitor articles.
 - Understand and **mimic the writing tone** of competitors.
 - Master how to write a perfect **first paragraph** for your article.
-

Main Process for Entity Extraction and Content Strategy:

Step 1: Collect Competitor Content

- Find and select **10 top-ranking competitor articles** on your chosen topic.
 - Example topic: *Best Men's Hairstyles for 2025*
 - Save the full text from each competitor article.
-

Step 2: Add Content to a File

- Copy all 10 articles into **one .doc (Word) file.**

- Keep it organized (like each article under its own heading).

Step 3: Upload the File to ChatGPT

- Upload the .doc file when starting a new conversation.
- Tell ChatGPT: "This file contains competitor articles for analysis."

Step 4: Use the Following Prompt:

Use this **powerful prompt** for NLP and Content Strategy:

Prompt:

"Act as an NLP + SEO Expert Content Strategist.

I will share a file containing full competitor articles about a trending topic.

Your job is to:

1. Extract and list important NLP entities.
2. Categorize these entities neatly.
3. Suggest how I can organically and naturally weave these entities into my own article (so it sounds natural, adds topical depth for SEO, and doesn't look keyword-stuffed)."

Important Notes:

-  Give ChatGPT the .doc file.
-  If needed, take **screenshots** of important sections and share with ChatGPT.
-  **Learn all keywords and entities** your competitors are using.
-  Base your content writing strategy heavily on this extraction.

After Entities Extraction:

- **Cover these entities** naturally in your article.

- **No stuffing!** It should feel smooth, like storytelling.
 - **Use examples, trends, celebrity mentions,** etc., to blend them naturally.
-

Writing Your First Paragraph:

Golden Rule:

Your first paragraph = The **Summary** of your whole article.

- Quickly explain:
 - What is this article about?
 - Why should the reader care?
 - What new information or trends will you share?

Example for Hairstyles 2025:

"Wondering what men's hairstyles will dominate 2025? From textured crops to low-maintenance buzz cuts, this guide explores the hottest trends, celebrity inspirations, and pro tips to keep you stylish throughout the year."

 Keep it **short, powerful,** and **curious.**

Analyzing Competitor Writing Tone:

Step-by-Step:

1. Copy the **competitor's article link.**
 2. Open ChatGPT.
 3. Give this **new prompt:**
-

Prompt to Analyze Writing Style:

"Analyze the writing tone, style, and structure of this competitor article (link below). Tell me if their tone is formal, conversational, casual, promotional, storytelling, or expert.

Suggest how I can adapt my writing tone to match or improve upon theirs."

✓ ChatGPT will:

- Tell you about the competitor's **tone** (e.g., casual, expert, friendly).
- Suggest if you should match it or create a better, more engaging tone.

✓ This is **important** because your article needs to feel familiar yet better than competitors.

Full Workflow Summary (Session 23)

Step Action

- 1 Collect 10 competitors' content
 - 2 Save all articles into a .doc file
 - 3 Upload the file to ChatGPT
 - 4 Use NLP + Entity Extraction Prompt
 - 5 Plan your own content using extracted entities
 - 6 Write a strong first paragraph
 - 7 Analyze competitor writing tone
 - 8 Adjust your tone to be better and more engaging
-

Pro Tips:

- Always **study 10 competitors**, not just 1-2.
 - Focus heavily on **Semantic SEO** — meaning **context**, **entities**, and **topics** around your keyword.
 - Think about **user intent**: Why is someone searching this topic?
 - Always have a **storytelling element** to keep your content human and interesting.
-

24 Lecture Article Writing REVISION previous

Continue--

Instructor: SIR AMMAR ASHFAQ

Lecture Objective:

- Understand the role of *above the fold* content
- Learn how to write an SEO-focused **introductory paragraph**
- Understand **keyword intent & prominence**
- Set the **correct word count** based on competitors
- Use **headings, related keywords & research** effectively
- Instruct **ChatGPT properly** to maintain tone and consistency

Above the Fold Area – First Impression Matters Most

Definition:

“Above the Fold” refers to the section of a webpage that is visible **without scrolling**.

Why is it Important?

- **User ka pehla impression** isi area se banta hai
- **Title, featured image, CTA (Download/Buy)** sab isi area mein hotay hain
- Google bhi is area ko **heavily prioritize karta hai** during crawling
- Agar yahan se engagement na mile to bounce rate barhta hai

Practical Elements of Above the Fold:

- **H1 Title:** Clear, keyword-rich
- **Featured Image:** Visually appealing & relevant
- **CTA Button:** e.g., “Download Now”, “Try Free”

- **Short Hook/Intro:** Engage the user in 2 lines

 *Example:*

“Tired of wrinkles but don’t know which cream works? Discover the top anti-aging products for 2025, reviewed by experts.”

NOW : Writing the Introduction Paragraph

 **Rule:**

“First Paragraph = Article Summary + Hook + Main Keyword”

It should:

- **Connect with the reader’s problem**
- **Use the main keyword naturally**
- **Summarize what the article will solve**
- **Create curiosity to scroll further**

 *Pro Tip:* Avoid fluff. Get to the point quickly with clarity.

NEXT: Keyword Intent & Targeting Strategy

 **Example Keywords:**

- best anti-wrinkle cream
- best cream for wrinkles
- which cream is best to reduce wrinkles on face
- best wrinkle removing cream for face
- best anti-aging cream

How Does Google Know the Main Keyword?

Google checks:

- **User intent:** What problem the user is trying to solve
- **Page content relevance:** Which keyword is repeated naturally

- **Context:** Through headings, slug, meta, etc.

Common Problem:

“Aap kisi keyword pe rank karna chah rahe hain, lekin Google kisi aur pe rank kar raha hai.”

Reason:

- Aapne **main keyword prominent** nahi banaya
- Aapka content **SEO-optimized** nahi hai
- Google confuse ho gaya kis keyword ko importance deni hai

Keyword Prominence Strategy

Where the Main Keyword Should Appear:

Element	Action
H1 Tag	Use exact match of the main keyword
Meta Title / Meta Description	Naturally include keyword
URL Slug	Include main keyword
First Paragraph	Use keyword once naturally
Headings	Add in at least one H2 or H3
Paragraphs	Use with 0.5%–0.8% density
Bold/Italic	Highlight keyword at least once
Image ALT Tag	At least one image should have it

Keyword Density Guide:

- 1000 words → use keyword 5–8 times (0.5–0.8%)
- Use: [Google Word Counter Tool](#) or any keyword analyzer

Section 5: How Long Should the Article Be?

4. Content Length: Match or Exceed Competitors

Don't write blindly.

- Use tools like **Ahrefs** to analyze word count of top 10 URLs
- Find:
 - **Min Word Count** (e.g., 260 words)
 - **Max Word Count** (e.g., 3300+ words)
 - **Ideal Target** → 3000–3300 words

 Why?

Content that is longer *and better structured* often outranks shorter, weaker articles.

Section 6: Competitor Heading Analysis + AI Prompting

Steps:

1. **Google** your main keyword
2. Copy **top 10–20 URLs**
3. Ask ChatGPT:

“Extract H1, H2, H3 from these URLs.”

4. If AI repeats existing headings, say:

“Make all headings unique and SEO optimized.”

5. Once headings are finalized, say:

“Write full article using these headings with research & data.”

Section 7: Tone Consistency + AI Instructions

Problem:

ChatGPT likhta hai lekin har section ka tone alag ho jata hai

** Solution:**

- Pehle se **tone fix karo**:

“Write like a skincare expert”

“Use my intro as reference tone”

- Har section ke start mein AI ko prompt do:

“Use same writing style as above, detailed, expert-like tone.”

- Agar AI bhool jaye:

“Forget all previous instructions. Now use this new tone...”

** Section 8: Keyword Repetition of Related Terms**** Keywords to Use Organically:**

- anti-aging
- wrinkle repair
- cream for fine lines
- firming night cream

Use each **1–2 times naturally**, not all in one paragraph. Spread them evenly.

** Final Summary Checklist**

Task	Completed?
Above the fold area structured?	
Intro connects reader + uses keyword?	
Keyword intent clear?	
Main keyword is prominent in H1, meta, slug?	
Keyword density between 0.5%–0.8%?	

Task	Completed?
Related keywords included?	☒
Article word count = top competitors?	☒
Headings analyzed & used?	☒
ChatGPT used with consistent prompts?	☒

Assignment:

☒ **Step-by-Step Practice Task** for Students:

1. Select a main keyword (e.g., “Best Night Cream for Men”)
 2. Google top 10 competitors
 3. Analyze:
 - Word count
 - Headings
 - Keyword use
 4. Use ChatGPT with correct prompts
 5. Write the intro + one full section with tone + SEO
-

25 Lecture Other Language Keyword Grouping

Instructor: SIR AMMAR ASHFAQ

Lecture Goals:

- Understand how to handle **keywords in other languages**
- Use **translation tools** effectively
- Learn **keyword grouping based on intent**
- Check for **plagiarism & spinning**
- Optimize with **internal/external linking**

Section 1: Multilingual Keywords – Problems & Solutions

Real Issue:

When we target **non-English keywords** (e.g. Thai, Spanish), direct translation can **misrepresent user intent** or result in **inaccurate wording**.

Problem Example:

Let's say you have a Thai keyword:

ครีมลดริ้วรอย

(Thai for “anti-wrinkle cream”)

You use **Google Translate** and it gives:

“Wrinkle reduction cream”

Lekin wo exact wording ho sakti hai jo local users **use nahi karte** — it might be grammatically correct, but not natural or SEO-relevant.

Section 2: Tools to Translate & Validate Content

Tool	Use
ChatGPT	Write content in English properly first
Google Translate	Basic translation
DeepL Translator	More accurate & context-aware translation

Step-by-Step Process:

1. Pehle **pure article ko English** mein likhwao (SEO optimized, ChatGPT se)
2. Then use **Google Translate + DeepL + ChatGPT** to translate that into the target language
3. Afterwards, check if **translated keyword exists** in the new language content
4. **Manually verify**: Paste translated keyword in Google search (in that language) — see if **relevant content** comes up

Section 3: Keyword Grouping Based on Intent

Definition:

Keyword Grouping means grouping together keywords that have **similar meaning or user intent**, even if the wording is different.

Example (English):

Main Keyword:

“Best wrinkle cream for women”

Related Keywords to Group:

- Anti-aging cream for women
- Cream to reduce fine lines
- Best anti-wrinkle moisturizer

- Night cream for wrinkles

Now in Other Language (e.g. Thai):

- Use **Google Translate** to translate each one
- Group keywords that express **same intent**
- Use them in **same article** without repeating meaning

Section 4: Keyword Shifter Tools

Use tools like **Keyword Sheeter** or **Keyword Tool.io** to extract long-tail or related keywords.

Example Process:

1. Go to Google
2. Type “keyword sheeter”
3. Copy-paste your main keyword
4. Export the list
5. Use Google Translate to convert those to target language
6. Now **group them by intent**

Section 5: Plagiarism Check & Content Authenticity

Tools Overview:

Tool	Pros	Cons
QuillBot	Great for paraphrasing	Can reduce originality
Copyscape	Strong database check	Expensive
Quetext	Checks for plagiarism + paraphrasing	Limited free access
Turnitin	Academic-level detection	Requires subscription

Tool	Pros	Cons
Grammarly Extension	Checks for grammar & plagiarism	Basic plagiarism scan only

How to Use:

- After finalizing your article (English or translated), **paste it in Quetext/Copyscape**
- If article shows “spun” signs (heavily altered but not original), **rephrase** naturally

Section 6: Internal & External Linking Strategy

Internal Linking (2–4 Links Minimum)

- Link your own articles that are **closely related**
- Example:

“If you want to learn about serums, check out our **guide on vitamin C serums.**”

External Linking (Optional: 1–2)

- Link to **authority websites** like WebMD, Healthline, etc.
- Adds credibility to your content
- Example:

“According to [Healthline](#), retinol is a proven anti-aging ingredient.”

Pro Tip:

Google ranks pages higher that:

- Are **original**
- Are **well-linked**
- Contain **keyword variations** grouped properly

- Are useful to the **user's search intent**
-

Final Workflow Summary:

Step Task

- 1 Write main article in English (ChatGPT)
 - 2 Translate using Google Translate + Deepl
 - 3 Translate main and related keywords
 - 4 Group keywords based on user intent
 - 5 Verify if keywords naturally exist in translated article
 - 6 Use plagiarism check tools
 - 7 Add internal links (2–4)
 - 8 Add optional external links (1–2)
 - 9 Review content flow and intent consistency
-

Student Assignment:

Target Keyword (in Thai, Spanish, or German)

- ✓ Translate it
- ✓ Write full article in English
- ✓ Translate that article using Google Translate + Deepl
- ✓ Perform grouping & verification
- ✓ Add internal/external links
- ✓ Run plagiarism check
- ✓ Submit final article + report

3 MODULE WORD PRESS

26 Lecture 3 MODULE

WORD PRESS

Instructor: SIR ABID REHMAN BAANGA

Lecture 26: Introduction to WordPress - Start from Zero

Lecture Goals:

- Understand what WordPress is and how it works
 - Learn about domain, hosting, themes & plugins
 - Use **Pantheon.io** to set up WordPress for practice
 - Build your first basic WordPress site step-by-step
-

1. What is WordPress?

WordPress is a **CMS (Content Management System)** that helps you **create websites** without writing code.

CMS Meaning:

CMS stands for **Content Management System** — a tool that allows users to manage content (text, images, videos) easily without needing to program.

2. Understanding Key Components

Domain

Domain is the **web address** of your website.

Examples:

- facebook.com

- google.com
- amazon.com

Just like your home has an address, websites have a **domain name**.

◆ Hosting

Hosting is the **storage** space on the internet where your website files, images, content, etc. are saved.

It's like a **hard drive on the internet**.

◆ WordPress Platform

WordPress itself is the **software** or platform that runs your website — installed on your hosting.

◆ Themes

Themes are **pre-designed templates** that define how your website looks.

- **Kadence Theme** (Recommended)
 - Comes with customizable **header, footer, logo, sidebar**
 - Clean and professional look
-

◆ Plugins

Plugins are **pre-built functionalities** that solve specific problems or add new features.

Examples:

- **Contact Form Plugin** (for forms)
 - **SEO Plugin** (like Rank Math or Yoast)
 - **Security Plugin** (like Wordfence)
-

◆ Kadence Blocks

These are **design elements** (like buttons, sections, etc.) used in page building.

Think of them like **Lego blocks** — you use them to build different parts of your site.

3. Types of WordPress Websites

Website Type	Purpose
Info Site	Share knowledge or blogs
Tool-Based Site	Provide online tools (like calculators)
Business Website	Show services and brand identity
Service Site	Freelancers & agencies offering services
E-commerce Site	Online product selling

4. Practice Platform: Pantheon.io

Pantheon.io is a third-party tool that provides a **free WordPress development environment** for practice.

Step-by-Step: Setting Up WordPress via Pantheon

- Step 1: Go to <https://pantheon.io>
- Step 2: Sign up using Google account
 - Click “Sign in with Google”
 - Allow authentication access
- Step 3: Dashboard → Click Create New Site
- Step 4: Select “WordPress” as your CMS
- Step 5: Enter any Site Name

Example: myfirstwpdemo

- **Step 6: Choose Region: USA**
- **Step 7: Click Deploy WordPress**

- This process may take **5 to 10 minutes**

5. Installing WordPress

Once deployed:

1. Click **“Visit Pantheon Site”**
2. Set language: Choose **English**
3. Set:
 - **Site Title**
 - **Admin Username**
 - **Password**
 - Optional: Uncheck “Discourage Search Engines” (to make your site visible)
4. Click **Install WordPress**

6. Logging into WordPress

- Copy your **WordPress site URL**
- Add: /wp-login.php or /wp-admin
- Enter your login credentials

Now you will see the **WordPress Dashboard**

7. WordPress Core Summary

Element	Description
Domain	Unique website address (e.g., yoursite.com)

Element	Description
Hosting	Storage space for your website content
WordPress	Software that runs the website
Theme	Controls the design/layout
Plugins	Add new features & solve problems
CMS	Allows you to manage your site without coding

Practice Assignment

- ☒ Set up your WordPress site using **Pantheon.io**
 - ☒ Install Kadence Theme
 - ☒ Add 1 plugin (e.g., a contact form)
 - ☒ Create 2 pages: "Home" and "About Us"
-

Pro Tip:

Every successful website needs:

- Good structure (theme)
 - Functional features (plugins)
 - Fast speed (hosting)
 - Clear branding (logo, content, menu)
-

27 Lecture 3 MODULE

WordPress Basic Setup, Theme & Plugin Installation

Instructor: SIR ABID REHMAN BAANGA

Step 1: Login to Your WordPress Site

- Go to your website login page.
- Enter your credentials to access the WordPress **Dashboard**.

Step 2: Clean Up Default Content

- **Delete Dummy Posts:** Go to **Posts** and delete all default posts.
- **Delete Dummy Pages:** Navigate to **Pages** and remove any default pages.
- **Delete Pre-installed Plugins:** Go to **Plugins** and delete any that are pre-installed.

Step 3: Configure Settings

- **General Settings:**

- Set your **Site Language** (e.g., Arabic, Spanish, etc.) based on your target audience.

- **Writing Settings:**

- No need to change anything here.

- **Reading Settings:**

- Make sure to check the option “**Discourage search engines from indexing this site**” during development.

- **Permalink Settings:**

- Select the option “**Post name**”.
- Click **Save Changes**.

These steps complete the basic setup after a fresh WordPress installation.

Theme and Plugin Installation

Step 1: Install Kadence Theme

- Go to **Appearance > Themes**.
- Click on “**Add New**”, search for “**Kadence**”.
- Click **Install**, then **Activate**.
- Delete all other unused themes to save space.

Step 2: Install Required Plugins

a) Kadence Pro Plugin

- Go to **Plugins > Add New > Upload Plugin**.
- Upload the Kadence Pro plugin file.
- Click **Install**, then **Activate**.
- Enter the **License Key** (provided through your portal access).
- Activate all **Pro Addons**.

b) Kadence Blocks

- Search for **Kadence Blocks** in the plugin directory.
- Click **Install**, then **Activate**.

c) Kadence Blocks Pro

- Same installation steps as Kadence Pro:
 - Go to **Plugins > Add New > Upload Plugin**.
 - Upload the plugin file.
 - Click **Install**, then **Activate**.
 - Enter the API/License Key.

Always update plugins when a new update is available.

Colors, Fonts, Header & Footer Setup

Colors & Fonts

- **Colors:** You can skip for now or keep the default.
- **Fonts:** Go to Typography Settings.
 - Use any of the following recommended fonts:
 - Poppins
 - Montserrat
 - Lato
 - Roboto

Header Setup

1. Go to the top black bar and click **Customize**.
2. In the **Header** section:
 - Click **Edit** on the Header area.
 - Click on the **Logo** section.
 - Upload your **Logo File**.
 - Customize logo size, remove title/tagline if needed.
 - Set **Site Title** and **Tagline** (important for SEO).
 - Set **Site Icon** (will appear in browser tab/serp).
3. To change Header Background:
 - Go to **General Settings > Design**.
 - Under **Main Row Background**, click the color picker to change the background color.
 - Use **Global Palette** to manage overall theme colors.

Make sure your logo and header have good color contrast for visibility.

Footer Setup

- In the **Customizer**, go to the **Footer** section.

- Click on the **Copyright** area.
 - Customize the text as needed.
 - Remove **Theme Credit** to get rid of “Powered by Kadence” text.
-

**Conclusion:**

This lecture covered all essential **post-installation steps**, from deleting dummy content, setting up **Kadence theme and plugins**, to **customizing header/footer**, fonts, and other UI elements.

27 Lecture 3 MODULE

WordPress Basic Setup, Theme & Plugin Installation

Instructor: SIR ABID REHMAN BAANGA

WP-S03-P01: Color Palette and Contrast Guidelines

1. Selecting a Color Palette

- **Use Colors Contrast Checker:** Navigate to [Colors Contrast Checker](#) to ensure your color combinations meet accessibility standards.
- **Install a Color Picker Extension:** Tools like "ColorZilla" or "Eye Dropper" allow you to extract color codes from any website.
- **Explore Brand Color Palettes:** Visit [brandcolor.net](#) to view color palettes used by various brands for inspiration.

2. Understanding Color Combinations

- **Avoid:**
 - Light background with light text (poor readability).
 - Dark background with dark text.
- **Recommended:**
 - Light background with dark text.
 - Dark background with light text.

3. Implementing in WordPress

- **Access Kadence Theme Settings:**
 - Go to Appearance > Customize > Colors & Fonts > Colors. ([17th Avenue Support](#))
- **Set Up Global Color Palette:**
 - Define your primary color palette here.

- You can set up to three palettes; however, only one is active at a time. ([My Digital Journey](#))
 - **Enable Dark Mode:**
 - Navigate to Appearance > Customize > General > Color Switch (Dark Mode).
 - Enable the color switch and configure the settings as desired. ([Kadence WP](#))
 - **Assign Dark Mode Palette:**
 - In the same section, assign your dark mode color palette.
 - You can also add a dark mode toggle in the header or footer using the Header/Footer Builder. ([Kadence WP](#))
-

WP-S03-P02: Header, Footer, Menu, and Pages Setup

1. Creating Essential Pages

- **Navigate to Pages:**
 - Go to Dashboard > Pages > Add New.
- **Create the Following Pages:**
 - About Us
 - Contact Us
 - Privacy Policy
 - Terms & Conditions([17th Avenue Support](#))

2. Setting Up the Menu

- **Create a New Menu:**
 - Go to Appearance > Menus > Create a New Menu.
 - Name it "Header" and click "Create Menu".
- **Add Pages to Menu:**
 - Add the pages you created earlier to this menu.

- Click "Save Menu".
- **Assign Menu to Header:**
 - Go to Appearance > Customize > Header > Primary Navigation.
 - Select the "Header" menu you created.

3. Customizing Header Layout

- **Choose Layout Type:**
 - In Appearance > Customize > Header, select from:
 - Standard
 - Full Width
 - Contained
- **Adjust Header Height:**
 - Use the "Height" slider to adjust the header's vertical size. ([Kadence WP](#))
- **Customize Colors:**
 - In the same section, go to Design > Navigation Colors.
 - Set colors for:
 - Normal
 - Hover
 - Active

4. Adding Buttons and Search Bar

- **Add a Button:**
 - In the Header Builder, click the "+" icon in the desired row.
 - Select "Button" and configure its label, link, and design settings. ([Kadence WP](#), [My Digital Journey](#))
- **Add a Search Bar:**
 - Similarly, add a "Search" element in the Header Builder.
 - Customize its appearance as needed.

5. Footer Configuration

- **Footer Layout:**
 - Navigate to Appearance > Customize > Footer.
 - Choose the number of rows (Top, Main, Bottom).
 - **Add Widgets:**
 - In each row, click the "+" icon to add widgets like "Navigation Menu", "Social Icons", "Text", or "Image".
 - **Customize Footer Colors:**
 - Go to Design > Footer Colors to set background and text colors for each row.
-

WP-S03-P03: Post and Page Layouts

1. Understanding Layout Types

- **Row Block > Detail:**
 - This structure is ideal for detailed content presentation.
- **Light Background with Dark Text:**
 - Provides high readability and is recommended for most content.
- **Dark Background with Light Text:**
 - Suitable for sections requiring emphasis or mood setting.

2. Post/Page Structure

- **Categories and Tags:**
 - Utilize categories to group related posts and tags to highlight specific topics.
- **Static Pages:**
 - Create static pages like "Home", "About Us", and "Contact Us" for essential information.
- **Content Layout:**

- Use a combination of text, images, and videos to enhance content engagement.
-

Additional Tips

- **Global Color Palette:**
 - Ensure consistency by using the same color palette across all pages.
- **Mobile Responsiveness:**
 - Check and adjust layouts for mobile devices using the Customizer's device preview options.
- ****SEO Optimization**

45 Lecture On page seo

Instructor: Muhammad Ali

Objective of This Lecture

- Understand what On-Page SEO is
- Learn about key components (meta, headings, images, URLs, etc.)
- See practical steps to apply On-Page SEO using WordPress

1. What is On-Page SEO?

Definition:

On-Page SEO refers to all the optimizations made directly **on a webpage** to improve its visibility in search engine results.

 *"These are the things you control directly on your website or blog page to help it rank better in Google."*

2. Core Components of On-Page SEO

2.1 Meta Tags

► Meta Title

- This is the clickable headline shown in Google search.
- **Limit:** 50–60 characters

Tip: Must include your main keyword.

Example:

How to Install App on Pixel 6 – Beginner's Guide

► Meta Description

- A short summary under your title in search results.
- **Limit:** 150–160 characters
- Include your keyword naturally.

Example:

Learn how to install any app on Pixel 6 or Aincrad 14. Step-by-step guide for beginners.

► Other Important Meta Tags:

- index / noindex → Allows or disallows indexing by search engines
- follow / nofollow → Tells Google whether to follow links
- canonical → Prevents duplicate content issues

► Breadcrumbs + Schema

- Breadcrumbs = Page navigation structure
- Schema = Extra code that helps Google understand your content better (e.g. FAQs, recipes, reviews)

2.2 Image Optimization

Always optimize your images for SEO:

- **File Name:** Use descriptive, keyword-based names
 install-app-pixel6.jpg
- **Alt Text:** Describes the image for Google
 Steps to install app on Pixel 6
- **Size:** Keep it light using tools like TinyPNG or WebP format

2.3 Keyword Optimization

- **Keyword Density:** Should be natural (1–2% is safe)
- **Keyword Placement:**
 - In the title (H1)
 - First 100 words
 - Subheadings (H2, H3)
 - Alt tags of images
 - Last paragraph

 Avoid Keyword Stuffing

 Use synonyms and related keywords to keep it natural

2.4 Semantic HTML Tags

- Use proper heading structure:
 - **H1** – Only once, for your page title
 - **H2** – For main sections
 - **H3** – For sub-sections under H2

Also, use semantic HTML5 tags like <article>, <section>, <aside>, <nav>, <footer> to give meaning to your content layout.

2.5 🕒 Breadcrumbs + TOC (Table of Contents)

- **Breadcrumbs** help both users and Google understand where they are on your site.
- **TOC (Table of Contents)** helps structure long articles, improves UX and SEO.

✅ Use plugins like **Easy Table of Contents** on WordPress.

2.6 🌐 URL Optimization

- Short, clean, and keyword-rich URLs
 - ✅ example.com/install-app-pixel6
 - ❌ example.com/?p=123

Tip: Use hyphens, not underscores

🔧 3. Practical Section (WordPress + Plugins)

Step 1: Create New Post

Go to: **WordPress > Posts > Add New**

→ Paste your blog content

Step 2: Install SEO Plugin

Recommended Plugin:

- **Rank Math SEO** or **Yoast SEO**

After activation:

- A purple box appears for SEO Title and Meta Description
- Fill it in with optimized title, description, and focus keyword

Step 3: Optimize the Article Content

✅ **Sample Optimized Title:**

Garment Steamer vs Iron – Which One is Better for Shirts?

→ Covers:

- *garment steamer vs iron*
- *better for ironing*
- *is steamer better than iron*

Use Multiple Keywords Naturally:

- In H1: Main Title
- In H2: Feature comparison
- In H3: Price, benefits, selection tips

 Don't overuse the primary keyword

 Use it naturally in H2/H3 and mix synonyms

3.4 Headings Optimization Example

- **H1:** Garment Steamer vs Iron – Which One is Better?
- **H2:** Comparison of Features
- **H3:** Pros & Cons | Price Comparison | Final Verdict

4. Keyword Research Tips

Use tools like:

- **Ahrefs**
- **Semrush**
- **Google Keyword Planner**

Find:

- Main Keyword
- Supporting Keywords
- Question-based keywords (e.g. "is steamer better than iron?")

Build clusters like:

- streamer vs iron
- garment steamer
- iron vs steamer
- best device for pressing clothes

5. Summary: On-Page SEO Checklist

Task

 Done

Meta Title + Description

Optimized URL

Headings H1 > H2 > H3

Keyword Placement

Image Optimization (alt + size)

TOC + Breadcrumbs

Semantic Tags

Rank Math or SEO Plugin

Practice Task

Create a blog post titled:

Best Budget Phones Under \$300 – 2025 Edition

1. Do basic keyword research
2. Write meta title + description

3. Use proper headings (H1 > H2 > H3)
4. Add 2 SEO-friendly images
5. Use Rank Math plugin to finalize

46 Lecture On page seo

WordPress SEO Basics (Permalink, Category, Images, Rank Math)

Instructor: Muhammad Ali

1. URL / Permalink Structure (Slug)

What is a URL (Permalink)?

It's the link to your article, like:

<https://yoursite.com/cinema-apk-vs-stremio>

Why It Matters:

Google reads your URL to understand your page. If the URL is messy, long, or doesn't have your main keyword, it **hurts your SEO**.

Best Practices:

- **Use your main keyword** (e.g., cinema-apk-vs-stremio)
- **Avoid dates** or versions (no 2025, v3.4.1 etc.)
- **Lowercase only** (no capital letters)
- Keep it **short & easy to read** (no gibberish like post?id=123)

In WordPress:

Go to **Settings → Permalinks → Select "Post Name"**

Or use Custom Structure:

`/category%/postname%/`

2. Categories and Subcategories (Taxonomy)

What is a Category?

It's how you **group related** articles.

Example:

- Parent Category: Streaming Apps
- Child: cinema hd, Stremio, Pluto TV

Why It Matters:

- Helps Google and readers understand your site structure
- Shows **related posts** in one place
- Helps you **rank for category keywords** too

 SEO Tip:

Use one **relevant category per post**, and keep category names **clean, short, and keyword-rich**.

 3. Image Optimization**Why Optimize Images?**

Big images = slow site. Google hates slow pages. Also, if your images don't have Alt text or keyword-rich filenames, they **won't rank in Google Images**.

 Image SEO Checklist:

- **Compress images** → Use [ImageCompressor.com](https://imagecompressor.com)
- **Rename images** → Example: cinema-hd -interface.jpg
- **Alt Text** → Always add descriptive text using your keyword
Alt Text Example: "Cinema hd home screen on Firestick"

 4. Rank Math Plugin (Free SEO Tool)**Why Use It?**

It automates 80% of your SEO work. It's beginner-friendly and better than Yoast SEO for most users.

 How to Use:

- Install it from **Plugins → Add New → Search: Rank Math**
- Follow setup wizard (watch video if needed)
- It helps with:
 - **Titles & Meta descriptions**
 - **Focus keywords**
 - **Sitemap**
 - **Schema markup (like FAQ rich results)**

Bonus: Example Setup for a Post

If you're writing a post about "Cinema hd vs. Stremio":

- **Slug (URL):**
/streaming-apps/cinema-apk-vs-stremio
- **Category:**
Streaming Apps
- **Image Name:**
cinema-vs-stremio-comparison.jpg
- **Alt Text:**
"Comparison between Cinema hd and Stremio streaming platforms"

Final Summary

Element	Why It Matters	What To Do
URL (Slug)	Google reads it for SEO	Keep short, lowercase, add keyword
Category	Helps Google understand structure	Use one clear category per post
Images	Speed + Image SEO	Compress, rename, and add Alt text

Element	Why It Matters	What To Do
Rank Math Plugin	All-in-one SEO tool	Helps you do SEO right from the dashboard

Lecture 47 – On-Page SEO

Instructor: Muhammad Ali

Previous continue

1. Meta Title & Meta Description Optimization

- **Slug & Permalink:**
These should be short, keyword-rich, and SEO-friendly (e.g., /streamer-vs-inen-review).
- **Meta Title Length:**
Keep the title length optimal (50–60 characters). Avoid too short or too long titles.

How to Write a Perfect Meta Title:

1. **Focus on CTR (Click-Through Rate)**
Use engaging and clickable words that grab attention.
 2. **Use 2-2-3 Keyword Pattern**
Include 2 primary + 2 secondary + 3 LSI keywords (optional).
 3. **Add Branded Word (if possible)**
Example: “Streamer vs Inen – Honest Review | MyTechBlog”
 4. **Use Dynamic Components**
Add changing elements like year or numbers to increase CTR.
 5. **Avoid Underscores (_)**
Always use hyphens (-) in URLs and slugs.
 6. **No Special Characters**
Avoid unnecessary symbols or emojis in the title.
 7. **Timeroid Feature (Optional)**
Use tools/extensions that can auto-update the date in your title for freshness (like WordPress plugins or dynamic title settings).
-

Example Titles

- **Basic Title:**
Streamer vs Inen: Which is Best for Streaming?
 - **CTR-Focused Version:**
Confused Between Streamer & Inen? Click to See a Detailed Comparison
-

2. Install SEO Tools for Meta Optimization

- Install "**Detailed SEO Extension**" (Chrome plugin)
 - It shows your Meta Title & Meta Description length.
 - Helps in checking real-time title rendering and pixel width.
 - Add your **brand name at the end** of your title for trust.
-

3. Install Table of Contents Plugin

- Plugin: **Easy Table of Contents**
- Why: Helps Google and users understand your page structure.

Setup Instructions:

- ☒ Enable it for **Posts & Pages**
 - ☒ Show Header Label above the table
 - ☒ Display table before the first H2
-

4. Internal Linking (Very Important)

- Link your own blog posts together using **anchor text**.
- Use related, helpful anchor text (don't stuff exact-match keywords).

Rules:

- Add 2 internal links per 1000 words.
- **Don't use primary keyword as anchor text.**

- If you have an article that covers the topic deeply, prefer linking to that internally instead of external links.
-

5. External Linking (With Care)

- Add up to 1–2 external links per 1000 words.
- Give credit to **authority sites only** (like Wikipedia, government sites, etc.).

Never:

- Never link to **competitors**.
 - Never give external links to **spammy or low-quality sites**.
-

6. Menu Optimization

- Add your **core articles/pages** into your main navigation menu.
 - Example: Add pillar content like “Best Streaming Apps,” “APK Installation Guide” directly to the menu.
 - Helps search engines understand the site's structure.
-

Recap:

-  Optimize Meta Title & Description
 -  Use SEO plugins for accuracy
 -  Install TOC plugin for structure
 -  Follow best practices for internal & external linking
 -  Optimize your menu for important content
-

48 Lecture on Technical seo

Instructor: Sir Tanveer Nandla

What is Technical SEO?

Technical SEO involves optimizing the infrastructure of a website to help search engines crawl and index it more efficiently. This includes site speed, schema, sitemap, robots.txt, and more.

Scope of Technical SEO (Fiver Scope)

- Core Web Vitals (Page Speed)
- Schema Markup
- Sitemap Optimization
- .htaccess & robots.txt File

Core Web Vitals – Improve Page Speed

These are Google's key metrics to measure user experience:

1. LCP (Largest Contentful Paint)

- Measures **loading performance**.
- Ideal: Under **2.5 seconds**.

2. INP (Interaction to Next Paint)

- Measures **interactivity**.
- Ideal: Under **200ms**.

3. CLS (Cumulative Layout Shift)

- Measures **visual stability** of the page.
- Ideal: Less than **0.1**.

- 👉 To avoid CLS, define fixed sizes for elements (like images, ads, etc.).

📌 Tool to Use:

Use **Google PageSpeed Insights** to check these metrics.

🔧 How to Fix Page Speed Issues

✅ Reduce Rendering Blockers

- Fix render-blocking JavaScript and CSS.
- Load only what's needed.

✅ Remove Unused Code

- Remove **unused CSS and JavaScript**.
- Only load required elements per page.

✅ Enable Caching

- Caching helps reduce repeated load times.

👉 Recommended Plugins:

- **LiteSpeed Cache Plugin**
- **WP Rocket Plugin** (*Sir's Favorite*)

🔴 Watch the video lecture to see how to install & configure these plugins.

🖼️ Image Optimization – Use WEBP Format

- Convert images to **.webp** format for smaller file sizes and faster loading.
- Use a **WEBP Converter Plugin**.

Steps:

1. Install the plugin.
 2. Import your preset or use default settings.
 3. Convert all images to .webp automatically.
-

File Optimization

- Combine multiple CSS/JS files to reduce requests.
- Use **preload, defer, or async** attributes wisely.

robots.txt & .htaccess Configuration

- Use robots.txt to control crawler access.
- Optimize .htaccess for caching, redirection, and security.

Summary

Element	Action Needed
Core Web Vitals	Improve LCP, INP, CLS
Page Speed	Reduce unused CSS/JS, caching
Plugins	Use LiteSpeed Cache / WP Rocket
Images	Convert to WEBP format
Layout Shifts (CLS)	Set fixed widths/heights for elements
File Optimization	Combine/minify JS/CSS files
robots.txt & htaccess	Proper configuration for SEO & speed

Must-Watch Lecture Tasks

- Watch the full lecture video.
- Follow the **plugin installation steps** shown.
- Enable and test your speed improvements using **PageSpeed Insights**.

Final Steps – Easy Setup Trick

Sir aapko ek **ready-made settings file** dein gy. Aapko sirf:

1. **Plugin install** karna hai (LiteSpeed Cache ya WP Rocket).

2. Plugin ki **settings mein "Import" option** mein jana hai.

3. Jo **file Sir dein gy, usay import** kar dena hai.

 Bas itna karne se **saari settings auto apply** ho jayengi — no manual setup needed!

49 Lecture On Technical seo

Instructor: Sir Tanveer Nandla

What is Schema Markup?

Schema markup (also known as structured data) is a special type of code you add to your website to help Google understand the content of your pages better. When Google reads this code, it can display rich results (like star ratings, FAQs, event info, etc.) directly in search results, which improves your visibility and CTR (click-through rate).

Why Add Structured Data to Google Search?

- Helps Google understand your content more clearly.
 - Improves how your pages appear in search results (e.g., featured snippets, knowledge panels).
 - Increases the chances of getting rich snippets.
 - Enhances your SEO and site credibility.
-

How Structured Data Works in Google Search

When you add schema markup using structured data formats like JSON-LD, Google can extract and display enhanced information. Instead of just reading plain text, Google reads this data structure and shows key info in search results.

Example: If you use “Article” schema, Google can display:

- Author name
 - Published date
 - Headline
 - Thumbnail image
 - Ratings (if available)
-

Supported Structured Data Format

✅ JSON-LD (JavaScript Object Notation for Linked Data)

This is the recommended format by Google and the one you should always use.

How to Add Schema Using ACF Plugin in WordPress

◆ Step 1: Install ACF (Advanced Custom Fields) Plugin

- Go to Plugins > Add New
 - Search for ACF – Advanced Custom Fields
 - Click Install Now, then Activate
-

◆ Step 2: Create Custom Field for Schema

- In your WordPress dashboard, go to Custom Fields > Add New
 - Name it something like "Schema Markup"
 - Add a field:
 - Field Type: Text Area
 - Field Name: schema
 - Set location rules:
 - Post Type is equal to Post
 - Post Type is equal to Page
 - Publish this Field Group
-

◆ Step 3: Generate Schema Code Using ChatGPT or Tools

- Ask ChatGPT to generate a JSON-LD schema code (like Article, FAQ, Product, etc.)
 - Copy the code
-

◆ Step 4: Paste Code into Theme's functions.php

- Go to Appearance > Theme File Editor
- Open the file: functions.php

- Paste this code block to pull the schema from ACF and output it in your page header:

php

CopyEdit

```
function add_custom_schema_to_head() {
    if (is_single() || is_page()) {
        $schema = get_field('schema');
        if (!empty($schema)) {
            echo '<script type="application/ld+json">' . $schema . '</script>';
        }
    }
}

add_action('wp_head', 'add_custom_schema_to_head');
```

Optional: Use Online Schema Generators

You can also use tools like:

- [Instant Schema Generator](#)
- Copy any YouTube or article link into these tools
- They will auto-generate schema (e.g., Video, Article, Product)
- Paste this schema into your ACF field in the post/page

Test Your Schema

Use Google's Structured Data Testing Tool or Rich Results Test to check if your schema is working:

- If it shows a green tick, the schema is valid.
- Always test your schema before publishing.

Important Notes

- The schema should match the actual content on your page.
- Don't use fake or misleading structured data—it can lead to penalties.

- You must include visible content (like the title, author, date) that matches the schema info.
 - Use ChatGPT to generate or validate clean, structured JSON-LD code for your use case.
-

Rank Math SEO Plugin

There is a full lecture available on how to set up the Rank Math SEO plugin, including:

- Enabling Schema support
- Adding Canonical Tags
- Managing meta settings

Follow that lecture for plugin settings setup.

Summary

- Schema markup improves your SEO and makes your content stand out in Google.
- Use the ACF plugin + functions.php method to add custom schema manually.
- Generate schema from trusted tools or AI (ChatGPT).
- Always test using Google's tools to verify your schema is working.
- Schema like Article, Video, Product, FAQ, etc., can boost your ranking and visibility.

Lecture 50 – Complete Guide to APK File Hosting, Download Site Setup & Google AdSense Approval

By: Sir Aswad Baloch

1. What is an APK Download Website?

An APK download site is a platform where users can download Android app files (.apk) directly — including original and MOD versions. If you're starting such a site, your main goals are:

- Fast file downloads
- User trust
- Google ranking
- AdSense approval for earning

2. Top Competitor APK Sites for Inspiration

To understand how to structure your APK site, study these competitors:

Site Name	Features
LiteAPK.com	MOD + original APKs, fast servers
AN1.com	Well-known MOD APK provider
ModYolo.com	Clean interface, regular updates
APKPure.com	Original APKs, old versions
Uptodown.com	Multi-platform support (Windows/Android)

3. User Experience for APK Downloads

Make sure your site offers:

-  Easy navigation (search bar, categories)
-  MOD + original version options
-  Fast download buttons (direct links preferred)
-  No redirects or pop-up ads

-  Screenshot previews & version details
-  Add old version links (v1.12, v1.15, etc.)

4. How to Host APK Files – Best Options

Free Hosting via 4Sync.com (Best for Beginners)

Step-by-step Setup:

1. Go to 4sync.com
2. Create a new Gmail account (fresh, clean)
3. Register on 4Sync using this Gmail
4. Add your phone number to verify the account
5. After login, skip the tutorial
6. From dashboard → Click Upload
7. Upload your .apk file
8. Rename the file (e.g., include your brand/domain name)
9. Click "Get Link" for a direct download URL
10. Copy the direct link and paste it on your Download Button in your site

Alternative Hosts (Pros & Cons)

Platform	Pros	Cons
MediaFire	Direct link, fast	DMCA takedown risk
Dropbox	Trusted name	APK install not possible
SymbolHost	Stable performance	Trial period, paid after limit
Self Hosting	Full control	Needs storage + server setup

 SymbolHost = APK file hosting company, claimed to be 22 years old. You can host your files there for a long-term setup.

5. iOS Apps and IPA Hosting

- iOS users can only install from App Store

- For jailbroken devices, you can offer IPA files (e.g., Dr. Driving MOD IPA)
 - Mention on your site that iOS installation may require Jailbreak
 - If app is already on App Store, give outbound link (counts as SEO backlink too)
-

6. Emulator Guide for PC Users

You must also target PC users searching “How to run APK on PC”

Guide steps:

1. Recommend emulators:

- Bluestacks
- LDPlayer
- NoxPlayer

2. Explain:

“Install emulator → Add APK → Launch app inside emulator”

 Bonus: Add outbound links to emulator sites = Extra SEO boost!

7. Add Old APK Versions

Old versions are HIGHLY searched. Example:

- Cinema hd v1.4.0
- v1.5.2
- v2.0 (stable)

Make a section like:

Download Old Versions:

- Version 1.4.0 – [Download]
- Version 1.5.2 – [Download]

This improves SEO + User trust.

8. AdSense Approval – Monetize Your APK Site

What is AdSense?

Google AdSense = Display ads platform for website owners.

You earn money when users:

- View ads
- Click on them

Revenue Sharing:

- 68% to publisher (you)
- 32% to Google

◆ Requirements to Apply

- Domain must be 30+ days old
- Website traffic: 100+ users/day
- Site must have:
 - Privacy Policy
 - About Us
 - Contact Us
 - Logo & favicon
 - Original content (no copy-paste)
- Avoid adult or illegal APK content

◆ How to Apply for AdSense (Step-by-Step)

1. Google: "AdSense Sign Up"
2. Click Start Now
3. Login with a new, clean Gmail (not personal email)
4. Add:
 - Site URL
 - Country (e.g., Pakistan)
 - Phone number
 - CNIC (ID card)
 - Address

- Bank info

5. Submit

◆ PIN Verification (Required)

- Google sends a PIN code (5–6 digits) to your home via postal mail
- Wait 21 days, then enter code
- If not received, you can request resend 2 more times

📌 Without PIN, earnings are held, no payout allowed.

◆ Important Notes

DOs

Use Rank Math for SEO & Meta Tags

Add emulator + old version sections

Make sure downloads work fast

Use fast hosting (or 4Sync/SymbolHost) Don't add misleading ads

DON'Ts

Never use copied APK site design

Don't apply with personal email

Don't fake ID or PIN

💰 9. AdSense Payout & Bank Setup

- Minimum payout: \$100
 - Google sends payment every 21st of the month
 - Reaches your bank in 3–5 business days
 - Use separate bank account for AdSense
 - Recommended: Freelancer USD account (less fees)
 - Typical fee: \$20–\$35
-

📄 10. Summary Cheat Sheet

Task

Tool

File Hosting 4Sync, SymbolHost, MediaFire

Task	Tool
APK Generator	ChatGPT, ModYolo, APKPure
Emulator Guide	Bluestacks, LDPlayer
SEO Plugin	Rank Math
Ad Monetization	Google AdSense
PIN Verification	CNIC & Address
Earnings Tracking	AdSense Dashboard

Final Tips

- Always give working direct download links
 - Add FAQ section, How to Install, MOD info, and Screenshots
 - Target low-competition keywords (e.g., "Cinema hd for PC v1.5.2")
 - Keep your file size small for fast download
 - Use CDN for faster APK load if hosting yourself
-

Lecture 52

Technical SEO – Advanced Training

(Based on lectures by Muhammad Ali)

1. Robots.txt

- Purpose: Controls which pages search engines can crawl.
- Location: Always in the root directory (<https://example.com/robots.txt>).
- Usage:
 - Allow/Disallow specific directories or pages.
 - Block duplicate content pages.
- Tip: For WordPress, Rank Math plugin can help manage Robots.txt settings.
- Watch: Lecture on Robots.txt settings for proper configuration.

2. Robots Meta Tags & X-Robots-Tag

- Meta Robots Tag: Placed in HTML <head> to control indexing per page.
 - index / noindex
 - follow / nofollow
- X-Robots-Tag: Added in HTTP headers for non-HTML files (PDFs, images).
- Use cases:
 - Block indexing of thank-you pages, admin areas, staging sites.

3. LLMs.txt

- Purpose: Guide for AI crawlers (emerging standard).
- Location: Root directory (like robots.txt).
- Usage: Control AI dataset usage and crawling.

4. Sitemap.xml

- Purpose: Tells search engines about important URLs.

- **Best Practices:**
 - Include only indexable pages.
 - Update automatically when new content is added.
 - Submit in Google Search Console.
-

5. Crawl Budget Optimization

- **Reduce unnecessary crawling by:**
 - Blocking irrelevant pages in Robots.txt.
 - Fixing redirect chains.
 - Eliminating duplicate URLs.
 - **Benefit:** Search engines focus on your important pages.
-

6. Canonical Tags

- **Purpose:** Prevent duplicate content issues by specifying preferred version.
 - **Example:**
 - `<link rel="canonical" href="https://example.com/main-page">`
 - **Use for:**
 - HTTP/HTTPS duplicates.
 - www/non-www duplicates.
 - Pagination.
-

7. .htaccess

- **Server configuration file.**
 - **Uses:**
 - 301 redirects.
 - Force HTTPS.
 - Block IPs.
 - Custom error pages.
-

Lecture 53

Website Speed & Optimization

Sir Tanveer

WP Rocket or LiteSpeed Cache

- Installation Steps:
 1. Add plugin from WordPress dashboard.
 2. Activate it.
 3. Configure caching & optimization.
 - Settings Tip: Enable *JavaScript defer* only if site functions correctly.
 - Alternative: LiteSpeed Cache (for LiteSpeed servers).
-

Perfmatters Plugin

- Lightweight performance plugin.
 - Features:
 - Disable unused scripts.
 - Remove query strings.
 - Lazy load images.
 - Watch: Lecture for installation and setup.
-

Lecture 54

Website Audit Process

Sir Muhammad ALi

Purpose of Audit

- Identify technical & on-page SEO issues.
- Check crawlability, speed, indexation.

Types of Audits

1. Manual Audit – Hard work, manual checking.
2. Tool-based Audit – Faster and scalable.

Recommended Tools

- Screaming Frog
- Sitebulb
- Ahrefs Site Audit
- SEMrush Site Audit

Screaming Frog

- Usage: Crawl your website like a search engine bot.
 - Checks:
 - Broken links
 - Redirects
 - Duplicate titles/descriptions
 - Missing alt tags
 - Watch: Detailed lecture for full usage.
-

Lecture 55 Website Audit Process

Watch lecture for it!

Lecture 57

Google Tools: Google Search Console

(Sir Faheem)

14. Google Search Console

- **Setup Methods:**
 - Domain property.
 - URL prefix property.
- **Uses:**
 - Track indexing status.
 - Monitor search performance.
 - Submit sitemaps.

15. Google Analytics

- Check user behavior.
 - Find traffic sources and conversions.
-

Lecture 58

Content Strategy – Honeymoon Period

(Tanveer Sir)

Niche Site Launch Plan

1. Preparation Phase

- Choose niche.
- Group content topics.
- Prepare domain & hosting.
- WordPress installation.
- Theme & design setup.

2. Article Publishing

- Initial: Publish 3 articles before going live.
- Add 10 articles total for launch.
- Aggressive approach: 20 articles ready before site live.

3. After Going Live

- Publish 1 article every 2 days until 15 days complete.
- Maintain interlinking between articles.
- Complete on-page SEO & technical SEO setup.

Tracking & Analytics

- Connect:
 - Google Search Console.
 - Google Analytics.
 - Microsoft Clarity (heatmaps, session recording).
-

1Honeymoon Period Boost

- Definition: Temporary boost for new sites in SERPs.
- How to Maximize:

- Strong UX (user experience).
- Frequent content updates.
- Re-index updated content.
- Edit publish date for freshness.

Example Update Schedule:

- Update 1 article on 20 July.
- Update another on 15 August.
- Request indexing after each update.

External Promotion

- Share content on:
 - X (Twitter)
 - Google News
 - Quora
 - Social media groups

Continuous Optimization

- Regular internal linking updates.
 - Track technical errors.
 - Combine off-page SEO with content updates.
-
-

Lecture 59

Session 1 – Off-Page SEO

By: Sir Aswad Baloch

1. Introduction to Off-Page SEO

- Off-page SEO means activities done outside your website to improve its ranking on Google.
 - It's mainly about building backlinks (links from other websites pointing to yours).
 - Good design, strong content, and A+ on-page SEO are the foundation — but to keep rankings stable, off-page SEO is a must.
 - Important: Results take time. This is not instant.
-

2. What is a Backlink?

- A backlink is when another website links to your site.
 - Example: If a blog puts your website's link in their article, you've got 1 backlink.
 - Backlinks are also called:
 - Link building
 - Off-page SEO
 - Google uses backlinks as a vote of trust — more strong, relevant backlinks = higher chances of ranking.
-

3. Why Social Signals Matter

- Social signals = engagement from social media platforms like Facebook, Twitter, LinkedIn, Instagram.
- Each interaction is a "signal":
 - 1 share = 1 signal
 - 1 like = 1 signal
 - 1 comment = 1 signal

- Posting your content on social platforms gives Google proof that people are talking about your site.
 - **How to use social platforms:**
 - Share posts on Facebook, Twitter, LinkedIn, YouTube, Instagram.
 - Learn how to post effectively (watch tutorials on YouTube).
 - Example: Posting a blog link on Facebook with a caption.
-

4. Anchor Text & URL

- Anchor text: Clickable words in a link (e.g., *Download inshot APK*).
 - URL: Direct web address link (e.g., <https://example.com>).
 - Keep your anchor text natural and varied.
-

5. Competitor Backlink Analysis

- Use tools like Ahrefs, SEMrush, Ubersuggest.
 - Check:
 - Referring domains (how many unique websites link to them)
 - Backlinks (total number of links — more than referring domains because one site can give multiple links)
 - DR (Domain Rating) = strength of the referring domains
 - UR (URL Rating) = strength of a specific page
 - Always click “One link per domain” in Ahrefs for clean data.
 - Referring page = the exact page that gave the backlink.
 - Tip: When buying backlinks, ensure linked domains < referring domains (this means the site is not spammy).
-

6. OBL (Outbound Links)

- OBL = number of external links a page has.
- Low OBL is better for paid links:
 - Paid link: OBL less than 5
 - Free link: OBL less than 20–50

- Check OBL with SEO extensions or Ahrefs.
-

7. Paid vs Free Links

- Paid Links:
 - Usually inside the main article body.
 - You control anchor text.
 - Free Links:
 - Found in comments, forum posts, profiles.
 - Anchor text may be generic.
-

8. Bonus Tip for Link Finding

- In Ahrefs, filter backlinks by topic/niche.
 - If a site in your niche ranks well, check its backlinks and try to get links from the same type of sites.
 - If DR is high and OBL is low, even irrelevant but authoritative backlinks can help.
-

9. Understanding Impressions

- If impressions are increasing → your on-page SEO is working.
 - If impressions are stable but clicks are low → start social sharing and branding.
-

10. Foundation Backlinks

Types of base-level backlinks every site should have:

1. Profile backlinks (sign up and add your link in the profile).
 - Use ChatGPT to get a list of high DR/DA profile backlink sites.
 2. Image submission backlinks (upload an image + add your website link in the description).
 - Use ChatGPT to get high DR image submission sites.
 3. Video submission backlinks (upload a video + link in description).
 4. Audio submission backlinks (upload an audio file + link in description).
- Make 30–50 foundation links, 5–6 per day.

11. Relevant vs Irrelevant Links

- Relevant link = comes from your niche (best option).
- Irrelevant but high authority link = still useful if DR is high and OBL is low.
- Use Ahrefs to check which post on that site gets the most traffic and place your backlink there.

12. Types of Backlinks

1. Foundation links (profiles, social)
2. Blog comments (no signup required)
3. Forum backlinks (signup + profile link)
4. Podcast backlinks
5. Cloud stacking
6. Google stacking
7. Wikipedia backlinks
8. Guest posting (publish new article with your link)
9. Niche edit / link insertion (add your link in an existing article)
10. Outreach strategy (contact site owners for link opportunities)

13. Guest Posting & Outreach

- Guest posting = writing a new article for another website with your backlink.
- Niche edit = inserting your link into an already published article.
- Outreach:
 - Find websites in your niche.
 - Send them a personalized email offering value.
 - Suggest a guest post or link exchange.

 This way, you combine on-page SEO + off-page SEO for long-term stable rankings.

Lecture 60

Session 2 – Off-Page SEO

By: Sir Aswad Baloch

1. Anchor Text Basics

- Anchor Text = The clickable text in a hyperlink.
- URL / Target URL = The web address where the link points.
- Anchor text tells Google what your linked page is about.

Example:

- Anchor Text: *ABC Menu*
- Target URL: <https://abcmenu.com/>

2. On-Page vs Off-Page

- On-Page SEO: Optimizing content *inside* your site.
- Off-Page SEO: Getting backlinks *from other sites*.
- Natural Links are best — Google trusts them more.

3. Interlinking & Diversity

- Interlinking: Linking one post to another within your own site.

Example:

- Post A: *ABC Menu*
- Post B: *ABC Drink Menu*
- Use different anchors for the same page to keep it natural.

Anchor diversity types:

- Main Keyword: Exact match (e.g., *Capcut Mod APK*)
- Related/Long-tail Keywords: Slight variations (e.g., *Capcut Pro APK without watermark*)

- Generic Anchors: General words (e.g., *Click here*, *Visit now*)
 - Naked URLs: The link itself (e.g., <https://abcmenu.com/drink-menu>)
-

4. Anchor Text Types

A) Main Keyword

- Exact target keyword.
- Used in contextual links from high-authority sites.

B) Related Keywords

- Variations or LSI terms related to the main keyword.
- Example: *APK Download*, *Latest Version APK*, *Android APK*.

C) Generic Anchors

- Non-keyword phrases:
 - *Click here*
 - *Read more*
 - *Visit site*
- Spread across multiple backlinks — don't overuse one phrase.

D) Naked URL

- Raw URL as the anchor:
 - <https://abc.com/>
 - <https://abc.com/page-name>
- Good for branding, profiles, forums, and blog comments.
- Never use in contextual guest posts or niche edits.

E) Character Anchors

- Anchor text made of characters/symbols (e.g., *., /, -*).
 - Rare, but sometimes used in navigation or directory listings.
-

5. Target URL Rules

Preferred URL format:

<https://abc.com/>

- Avoid using:
 - <http://abc.com/>
 - <https://www.abc.com/>
 - All should redirect to the preferred version.
If they don't, there's a technical issue on your site.
-

6. Backlink URL Distribution

Micro Website (Small niche site)

- 50% backlinks → Homepage
- 50% backlinks → Inner posts

Brand/Macro Site

- 20–30% backlinks → Homepage
- 70–80% backlinks → Inner posts

Single Page Site

- 100% backlinks → Homepage
-

7. Example Distribution

If you build 200 backlinks for a micro website:

- 100 backlinks → Homepage
 - 80 of these → Preferred URL
 - Rest → Alternate URLs (redirected)
 - 100 backlinks → Inner posts
-

8. Anchor Text Distribution Example

For 100 homepage backlinks:

- 30–40 links = Naked URL
- 30–35 links = Generic anchors
- 10–20 links = Related keywords
- 5–10 links = Main keyword

Generic Anchor Examples:

- *APK*
- *Download*
- *Latest Version*
- *Android*

Related Anchors:

- Choose top related keywords from keyword research and use them 2–4 times each.
-

9. Usage Rules for Anchor Types

- **Naked URL:** Use for foundation links (branding, forums, blog comments). Not for contextual guest posts.
 - **Main Keyword:** Use in contextual backlinks from high-authority sites or forums.
 - **Generic Anchors:** Use anywhere, but avoid overuse in contextual articles.
 - **Related Keywords:** Best for contextual backlinks on high-authority sites.
-

10. Assignment / Task

- Build 100 homepage backlinks + 100 post backlinks.
- Create a Google Sheet with:
 - Target URL
 - Anchor Text
 - Link Type
 - Backlink Source
- This will help:

Sin Aswad personally verify your work.

Track anchor usage for balance.

11. Pro Tips

- Keep anchor text natural — avoid repeating exact keywords too much.
- Distribute anchors evenly to avoid Google penalties.

- **Always mix:**
 - **Branding anchors**
 - **Generic anchors**
 - **Related keywords**
 - **Naked URLs**
- **Check competitor anchor profiles for inspiration.**

Anchor Text Distribution Chart

Anchor Type	Homepage (100 Links)	Inner Posts (100 Links)	Color Code
Naked URL	30–40% (30–40 links)	25–30% (25–30 links)	 Blue
Generic Anchors	30–35% (30–35 links)	25–30% (25–30 links)	 Green
Related Keywords	10–20% (10–20 links)	20–25% (20–25 links)	 Yellow
Main Keywords	5–10% (5–10 links)	15–20% (15–20 links)	 Red
Character Anchors	0–5% (Optional)	0–5% (Optional)	 White

Lecture 61

Reverse Engineering On-Page SEO

By: Sir Aswad Baloch

◆ Introduction

Reverse engineering SEO means analyzing your competitors' websites, backlinks, and on-page factors to understand what makes them rank. Instead of guessing, you learn directly from what already works.

We use tools like **Google Search Console**, **Semrush**, and **Ahrefs** to find insights. Let's go step by step.

1. Start With Google Search Console (Your Own Website)

- Connect your website to **Google Search Console**.
- Analyze:
 - Keywords you are already ranking for.
 - Positions of your keywords.
 - Countries bringing traffic.
 - Links pointing to your site.
- This helps you know your **baseline performance** before checking competitors.

2. Analyze Competitors (Using Semrush & Ahrefs)

- Enter your competitor's domain into **Ahrefs** or **Semrush**.
- Focus on competitors in the **same niche**.
- Collect:
 - Keywords they rank for.

- Backlinks (quantity + quality).
 - Top pages bringing them traffic.
 - Target competitor sites with **Domain Traffic > 50** (avoid dead/low-traffic sites).
-

3. Backlink Analysis

- Check competitors' **backlink profiles**.
 - Important factors:
 - **OBL (Outbound Link) Score** → Prefer sites with **low OBL** (not linking out too much).
 - **Domain Authority & Relevance** → Backlinks should come from relevant categories.
 - **Link Type** → Contextual links are most valuable, then guest posts, forums, etc.
 - Export competitor backlinks into a sheet for better analysis.
-

4. Anchor Text Distribution

- In Ahrefs, check **Top Anchors** of competitor backlinks.
 - **Rules:**
 - Your **main keyword should NOT appear in the Top 5 anchors** (to avoid over-optimization).
 - Top anchors should mostly be:
 - **Naked URLs** (e.g., <https://example.com>)
 - **Generic keywords** (e.g., "click here", "visit site")
 - Branded and partial match anchors are safer than exact match.
 - Balance anchor text for **natural distribution**.
-

5. On-Page Factors (Reverse Engineering Competitor Pages)

- Study your competitors' **top-ranking pages**:
 - **Page Title & Meta Description**
 - **Headings (H1, H2, etc.)**
 - **Content length & structure**
 - **Keyword usage (density, placement, variations)**
 - **Internal linking strategy**
 - Understand why Google is ranking them → apply improved strategies on your site.
-

6. Practical Steps (Workflow)

1. Open competitor's site in **Ahrefs**.
 2. Export backlink data.
 3. Download backlink sheets for at least **7 competitors**.
 4. Filter the data:
 - Keep traffic > 50.
 - Low OBL sites.
 - Relevant categories.
 5. Save credits in tools (don't waste them) → only change the domain at the top while keeping filters.
 6. Collect anchor text distribution separately.
-

7. Key Takeaways

- **Never over-optimize** anchor text → Google may penalize.
- **Relevancy is more powerful than quantity** in backlinks.
- **Generic & branded anchors** should dominate top 5 anchors.
- **Contextual links** > forum/comment links.

- Reverse engineering shows you what **already works** instead of experimenting blindly.
-

Final Note (Lecture Closing)

Reverse engineering SEO is about **learning from competitors** and **adapting their winning strategies** into your own site with improvements. By following backlink profiles, anchor text patterns, and on-page structures, you can reduce trial and error and grow rankings faster.

Lecture 62

Topic: Nandla Strategy – Building Backlinks from Top Authority Sites

Lecture by Sir Tanveer

◆ Introduction

In SEO, backlinks are votes of trust. The more quality votes you get from strong websites, the more powerful your site becomes.

Today, we'll learn **Nandla's Strategy** → how to build backlinks from the **top 50,000 websites in the world**.

If you succeed in getting even **200 backlinks** from these sites, no one can stop you from ranking.

1. Why Target Top Websites?

- These sites already have **millions of visitors** and **huge authority**.
- Even a simple **naked URL link** from them is powerful.
- Examples: YouTube, Instagram, LinkedIn, Reddit, Wikipedia, Facebook, Pinterest, TikTok, GitHub, etc.

2. Step-by-Step Strategy

Step 1: Identify Top 50,000 Websites

- Use **SimilarWeb, Ahrefs, Semrush, or free lists** available online.
- Focus on sites that are **trending upward** and have **organic traffic**.

Step 2: Create Backlinks from Authority Platforms

✓ YouTube

- Create a channel, upload videos.
- Add your website link in:
 - Video descriptions.
 - Channel bio.
- Even a **naked link** is valuable.

✓ Instagram

- Create a profile, add your website in the **bio**.
- Use stories, posts, and reels → mention site with “link in bio”.

✓ Facebook

- Add your site link in **About section**.
- Create posts and pages → naturally mention your link.

✓ Reddit

- Don't spam.
- First, **participate** in discussions.
- Then, share your link as part of a genuine answer.
- Example: “I found this resource helpful: [your link]”.

✓ OpenAI Community Forums / Developer Forums

- Join discussions.
- Provide helpful answers → include your link as a reference.

✓ Pinterest

- Upload images/pins related to your niche.
- Add your website in the **pin description**.

✓ TikTok

- Add your link in the **bio**.

- Create engaging short videos to drive attention.

✓ Canva

- Publish free templates with your link in the description.

✓ X.com (Twitter)

- Add your site in profile bio.
- Tweet with link occasionally (don't spam).

✓ Adobe, Spotify, Walmart, High-Gov websites

- Many allow **profile creation or contributions** → add your link there.

✓ GitHub

- Create a project/repo.
- Add your website in the **README.md** file.

✓ App Stores (Play Store / iOS Store)

- If you have an app, add your website in the **app description**.

✓ Country-Specific Links

- If you target Brazil, get backlinks from **Brazilian platforms**.
- Local authority sites give extra relevance.

3. Important Tips

- UI/UX of your site should be **clean & trustworthy**.
- Don't expect instant results → SEO is about patience.
- Even **free backlinks** from these sites are very powerful.
- Participate in communities genuinely (Reddit, forums, etc.).
- Focus on **naked URLs and branded anchors**.

4. Summary (Key Points)

- Backlinks are **votes of trust**.

- Getting **200 backlinks from top 50,000 sites** = SEO success.
 - Use platforms like YouTube, Instagram, LinkedIn, Reddit, Pinterest, TikTok, GitHub, App Stores, etc.
 - Always aim for **natural participation** and not spamming.
 - Even a **naked link** from a top site is a big achievement.
-

Closing Line (for Students)

“If you master Nandla’s strategy and consistently build links from the **world’s top websites**, your website will automatically gain authority and traffic. Remember, backlinks are not about quantity alone, they’re about **quality and source authority**.”

 Lecture 63**Nandla Strategy – Community & Forum Link Building****Sir Aswad Baloch**

1. What is Nandla Strategy?

- Nandla Strategy = **Ranking method using community/forum links.**
- Instead of relying only on guest posts, you create **natural links** through forums, profiles, and communities.
- These links are practical, safe, and help in **Google ranking** when done properly.

2. Target Link Sources

- **Guest Posting** → General sites, APK sites, Meme sites, Tool-based sites.
- **Community Forums** → 100+ sites (best for Nandla).
- **Profile Links** → Create profiles with image, bio, and links.
- **Practical Forum Participation** → Posting questions, answers, and discussions.

3. Gmail & Account Setup

- Don't use your main Gmail.
- Create **5 random Gmail accounts** with different names.
- Each Gmail will be used to join different forums.

4. Forum Sign-Up & Activity

1. Choose relevant forums (tech, APK, memes, tools, etc.).
2. Sign up with each Gmail.
3. Complete profile: add **profile picture, bio, about section.**

4. Make **10+ random posts or replies** before adding any links.
 5. Wait at least **1 week** before placing your backlink.
-

5. Forum Posting Strategy (Practical Nandla Steps)

- **Gmail #1** → Post a question on the forum.
- **Gmail #2** → Reply to that question (helpful answer).
- Repeat with other Gmail accounts → Create a natural discussion.
- Once engagement looks real, **insert your backlink** inside one of the replies.

⚡ This makes the backlink look organic and natural.

6. Backlink Indexing (Important Step)

Backlinks must be indexed to be effective.

Check if a forum post is indexed:

- Google search: `site:forum.com/post-url`
- If it shows → indexed 
- If not:
 - Submit URL in **Google Search Console**.
 - Share link on **social platforms**.

👉 Always record backlink URLs in a Google Sheet.

7. Finding Forums for Nandla Strategy

- Use **Ahrefs** → Collect 1000–5000 forums/communities.
- Or use **ChatGPT** to find niche-specific communities.
- WordPress-based forums are also good options.

⚠ Warning: If you use too many accounts on one forum → account may get blocked. Use wisely.

8. Anchor Text Ratio

- Don't over-optimize.
 - Use **95% generic/natural text** (e.g., "here", "check this resource", "read more").
 - Only **5% exact keyword anchors**.
-

9. Monitoring

- Save all forum links in Google Sheets.
 - Check weekly in **Google Search Console** for indexed links.
 - If a link is lost or not indexed, replace with a new one.
-

10. Tips for Nandla Strategy

- Never spam – always provide **value in posts**.
- Be patient – backlinks should come after real engagement.
- Complete your profile for trust.
- Spread activity across multiple forums.
- Focus on relevancy and indexing.

Lecture 64

Contextual Backlinks (Guest Post & Niche Edit Strategy)

By: Muhammad Sayfullah

1. Contextual Backlinks Basics

- **Guest Post** → Publishing a new article on another site with your backlink inside.
- **Niche Edit** → Adding your backlink inside an **already published** article on another website.

👉 Both methods improve **SEO rankings, traffic, and authority**.

2. Prospecting (Finding Websites for Links)

Steps:

1. Copy your competitors' backlinks using SEO tools (Ahrefs, SEMrush, Ubersuggest, etc.).
2. Apply filters:
 - **One backlink per domain**
 - **Backlink type = In-content link**
3. Export the filtered list.
4. Repeat the same process for each competitor.

👉 Collect minimum **1000+ sites** to work with.

3. Organizing Data in Google Sheets

Create a Google Sheet with columns for:

- Website URL

- Domain (convert URLs to domain using ChatGPT or Excel formula)
- DA/DR/Traffic (metrics)
- Contact Email
- Contact Name
- Notes (editor requirements / costs / follow-up status)

⚡ This will help you stay organized during outreach.

4. Email Hunting (Finding Editors' Emails)

- Use tools like **Hunter.io** → Enter the website URL to find editor emails.
- If no result:
 - Check the Contact Us page.
 - Search LinkedIn for editors/writers.
 - Use Chrome extensions for email discovery.

👉 Collect at least **2 emails per website** for backup.

5. Keyword Hunting (For Niche Edits)

Use ChatGPT with this prompt:

👉 “Give me long-tail keywords that are semantically relevant to [your keyword] and address different search intents.”

- These keywords can be suggested to editors for **relevance** when adding your backlink.

5. Outreach Process

Tools: **Mailshake, Instantly, SalesHandy**

Steps:

1. Create a new campaign in the tool.
2. Import the Google Sheet (Name, Email, Website, etc.).

3. Add your outreach email template.
 4. Insert personalization variables (First Name, Website, Offer, Deadline).
 5. Start sending emails.
-

7. Outreach Rules

- Send **15–20 emails per day per account** to avoid spam filters.
 - Always personalize the message (avoid copy-paste spam).
 - Use follow-ups if no response is received.
 - Track responses and results in Google Sheets.
-

8. Sample Niche Edit Email Template

Subject: Suggestion for your article on [Topic]

Hello [First Name],

I enjoyed reading your article on [URL/Topic]. It's very detailed and helpful. I had a quick idea—what if you add an extra resource that could give your readers more value?

I run [Your Website], where we recently published an in-depth guide on [Keyword]. It would fit perfectly into your article and help your audience.

Would you be open to adding this resource to your post?

Best regards,
[Your Name]

9. Important Tips

- Focus on **quality sites** instead of just numbers.
- Track all outreach attempts and replies.
- Build long-term relationships with editors.
- Avoid spammy mass emails.

10. Workflow Recap

1. Competitor backlink research
2. Apply filters → Export list
3. Organize data in Google Sheets
4. Find editor emails
5. Generate relevant keywords
6. Outreach via Mailshake/Instantly
7. Send 15–20 personalized emails daily
8. Follow up & secure backlinks

Lecture 65

Guest Post Link Building Strategy

By: Muhammad Sayfullah

1. Finding Guest Post Opportunities

- Use **Google Search** with queries like:
 - "Write for us"
 - "Guest post guidelines"
 - "Contribute article"
- These queries help you find websites that **accept guest posts**.

👉 Example: Search for "Write for us technology" and you will find relevant sites.

2. Using SEO Tools for Guest Post Sites

- Open tools like **Ahrefs / SEMrush**.
- Go to **Outgoing Links → Linked Domains**.
- Apply filters:
 - Find domains that **already publish guest posts**.
- Export this list → These are websites where guest posting is possible.

3. Export and Organize in Google Sheets

Create a Google Sheet with columns:

1. **Domain**
2. **Email** (of editor/owner)
3. **First Name**

👉 Only keep domains that look **active and relevant**.

4. Email Hunting (Finding Contacts)

- Use tools like **Hunter.io / Snov.io / FindThatLead**.
 - Enter the domain to find editor/writer emails.
 - If no email is found:
 - Check website's "Contact Us" page.
 - Use LinkedIn to find content editors.
 - Collect **at least 2 emails per site** for backup.
-

5. Preparing for Outreach

- Export your cleaned list into Google Sheets.
 - Columns required:
 - Name
 - Email
 - Website
 - This sheet will be uploaded to your outreach tool.
-

6. Outreach Campaign Setup

Tool: **Instantly / Mailshake / SalesHandy**

Steps:

1. Create a new campaign.
2. Import your Google Sheet (Name, Email, Website).
3. Select your **Guest Post outreach template**.
4. Add personalization variables:
 - First Name
 - Website Name

- Topic/Offer
5. Start campaign.
-

7. Guest Post Outreach Email (Sample Template)

Subject: Guest post idea for [Website Name]

Hello [First Name],

I came across your website [Website Name] and noticed that you accept guest contributions. I'd love to share a high-quality article on [Topic/Keyword] that your readers would enjoy.

All content I provide is:

- ✓ 100% original
- ✓ Well-researched and engaging
- ✓ Optimized for your audience

If you are open to contributions, I'd be happy to send you some topic ideas.

Looking forward to your reply!

Best,

[Your Name]

8. Important Rules

- Personalize every email → never send generic copy-paste.
- Limit to **15–20 emails per day per account** to avoid spam.
- Track replies in Google Sheet.
- Build long-term relationships with editors for repeat guest posting.

Module

local seo

local seo

By Sir Khurram Ali:

1. What is Local SEO?

Definition:

Local SEO (Search Engine Optimization) is the process of optimizing a business to appear in local search results on Google and other search engines. It focuses on **geo-targeted marketing**, meaning the goal is to reach customers in a specific location.

Example:

When we provide digital marketing services for a business located in a specific area (like *Dentist in Lahore* or *Plumber in Multan*), that's Local SEO.

Formula:

Anchor Site + Keyword + Location = Local SEO

Example: *Plastic Surgeon in Multan* or *Car Rental in Karachi*.

2. Local SEO vs Traditional SEO

Aspect	Local SEO	Traditional SEO
Target	Focuses on specific local areas or cities	Targets global or national audiences
Examples	Local services (dentists, electricians, etc.)	Blogs, affiliate sites, APKs
Search Intent	"Near me" or city-based queries	Broad keyword intent
Competition	Usually lower	Higher
Conversions	High, since users are ready to buy	Moderate

3. Scope and Market of Local SEO

- Businesses are operating **worldwide** and every local business needs marketing to attract nearby customers.
- Local SEO professionals can offer services to **international clients** as well.
- Local SEO demand is growing because it helps small and medium businesses compete online.

Popular Marketplaces:

1. **Upwork** – Major platform (90% of freelance opportunities).
2. **LinkedIn** – Networking and lead generation.
3. **Worldwide clients** – Businesses in the USA, UK, and other countries hire remote experts.

4. Benefits of Local SEO

1. **Easy to learn and apply**
2. **High-paying projects** – Clients pay between **\$300–\$2000 per project**
3. **Stable income** – Safe from frequent Google updates because it's based on *real businesses*
4. **Low competition, high conversion** – Due to small local markets

5. Types of Local SEO Businesses

A. Service-Based Businesses

Examples:

- Plumbers
- Electricians
- Towing services
- Car rentals
- Cleaning companies
- Lawn care and mowing

- Real estate agents
- Gardening and pest control

B. Product-Based Businesses

Examples:

- Gift stores
- Pharmacies
- Toy shops
- Clothing boutiques
- Paint and cosmetic stores

C. Hybrid (Products + Services)

Examples:

- Doctors
- Restaurants
- Automobile workshops
- Dentists

6. Popular Local SEO Niches

Some profitable niches include:

- Doctors and dentists
- Lawyers
- Rental services
- Contractors
- Towing companies
- Tree removal services
- Lawn care
- Pest control

- Electricians
-

7. Ingredients of Local SEO

To successfully rank a local business, you need the following steps:

1. **SEO Audit** – Analyze the website's current performance.
 2. **Keyword Research & On-Page SEO** – Find local keywords and optimize content.
 3. **Technical SEO** – Fix speed, mobile-friendliness, and indexing issues.
 4. **Website Design & Generation** – Create a professional and user-friendly website.
 5. **Off-Page SEO** – Build local backlinks and citations.
 6. **Content Planning & Writing** – Create engaging service and blog content.
 7. **Google My Business (GMB)** – Set up and optimize your GMB profile.
 8. **Monetization** – Learn how to earn from local SEO projects.
-

8. Monetization Models in Local SEO

There are several ways to make money:

1. **Client Services:**
Offer SEO services directly to local businesses (easy and well-paid).
 2. **Pay Per Call / Pay Per Lead:**
Get paid for every call or lead you generate for a client.
 3. **Rank and Rent Model:**
 - Build and rank a local website (like *TreeRemovalHouston.com*)
 - Forward the calls to a real business owner for a monthly fee.
-

9. Common Local SEO Issues

Issue	Description
Low Search Volume	Keywords often have 10–1000 searches/month, but higher conversion.
Thin Content	Many local sites have 150–300 words only. Should be improved.
Lack of Blog Depth	No valuable blog content to support authority.
Missing CTA (Call To Action)	No buttons or contact prompts for users to act.
No SSL Certificate	Site security issue; lowers trust.
Slow Loading Speed	Affects ranking and user experience.
Few Pages	Limited content lowers ranking potential.
Missing Legal Pages	Must include Privacy Policy, Terms, and Disclaimer.
No Location Pages	Separate pages needed for each service area.

10. Google My Business (GMB)

Definition:

Google My Business (now called Google Business Profile) helps your business appear on Google Maps and local search results.

Local Pack:

The section on Google that shows 3 nearby businesses related to a search query (e.g., “Best Dentist in Lahore”).

Types of Results in Local Search:

1. **Sponsored Ads (Google Ads)**
2. **Local Pack (Map Listings)**
3. **Organic Search Results**

Google Guaranteed Badge:

- A special trust badge for verified local businesses.

- Costs around **\$300** for verification.
-

Summary

- Local SEO focuses on ranking local businesses in specific regions.
 - It's easy to learn, high-paying, and globally in demand.
 - Success depends on proper keyword targeting, strong GMB optimization, and real local backlinks.
 - Ideal for freelancers who want steady clients in a low-competition, high-conversion niche.
-
